

## MijoShop Quick Guide

### 1.1 What is MijoShop?

**MijoShop** is a full-featured e-commerce component for Joomla with an easy to use, search engine friendly, visually appealing interface.

MijoShop is the integration of two of the most popular open source projects in the world: OpenCart and Joomla!

We developed MijoShop so you could enjoy the power & flexibility of OpenCart and ease-of-use of Joomla! right inside your Joomla! site.

#### Notes:

1. Joomla **1.5** & **2.5** compatible
2. User synchronization between Joomla & OpenCart (single login)
3. MijoShop (OpenCart) is a native Joomla! component (not bridge/iframe)
4. Joomla SEF URLs & SEO (Metadata) support, also with SEF components
5. Plugin for MijoSEF component for better SEF URLs and automatic Metadata generation
6. All OpenCart extensions (modules, payment gateways etc. except themes) can be installed/used
7. All OpenCart modules can be used as Joomla modules
8. Joomla 2.5 & JoomFish multi-language support
9. Sitemap support, Xmap and internal sitemap
10. Integrated with Joomla search
11. Automatically integrated with Joomla templates, 0 conflicts
12. MijoShop will inherit styles from your website template right out of the box ensuring it always matches yours site
13. Integrated with Joomla breadcrumbs
14. Content plugin to display products everywhere
15. Using Joomla editors (JCE, JCK etc) inside OpenCart
16. Migration tool for VirtueMart, HikaShop, redSHOP, Tienda, JoomShopping and RokQuickCart
17. Hack-free solution, no OpenCart files changed thanks to vQmod
18. GNU/GPL Licensed, installation & support for unlimited domains

## **1.2 What can you do?**

### **1.2.1 Catalog Management**

- ❖ Unlimited & Nested Categories
- ❖ Unlimited Products
- ❖ Unlimited Manufacturers
- ❖ Product can be assigned to multiple categories
- ❖ Product Reviews
- ❖ Product Ratings
- ❖ Product Options
- ❖ Product Attributes
- ❖ Product Attribute Groups
- ❖ Product Tags
- ❖ Product Returns
- ❖ Downloadable (Digital) Products
- ❖ Related Products
- ❖ Compare Products
- ❖ Unlimited images possible for each product
- ❖ Automatic Image Resize
- ❖ Products & Options Stock

### **1.2.2 Order & Sales**

- ❖ One-page checkout
- ❖ Guest Checkout
- ❖ Custom Order Statuses
- ❖ Custom Stock Statuses
- ❖ Multi Store
- ❖ Multi Currency
- ❖ Multi Tax Rates
- ❖ Order History
- ❖ Printable Invoices
- ❖ Address Book
- ❖ Shipping Weight Calculation
- ❖ Advanced Sales Reports
- ❖ Google Analytics integration
- ❖ Internal Graphical Reporting
- ❖ Returns
- ❖ Coupons
- ❖ Gift Voucher
- ❖ Search and sort in orders
- ❖ Basic mailing system

### **1.2.3 Extensions & Systems**

- ❖ 20+ Payment Gateways
- ❖ 8+ Shipping Methods
- ❖ Modular System (1000+ modules)
- ❖ Templatable
- ❖ Custom Reports (50+ reports)
- ❖ Translated in 50+ Languages
- ❖ Reward Point System
- ❖ RMA System
- ❖ Affiliate System
- ❖ Wishlist System
- ❖ Credits System
- ❖ Reorder System

### **1.2.4 User Management**

- ❖ Shopper groups
- ❖ Prices per shopper group
- ❖ Geolocation
- ❖ Multi Language
- ❖ B2B
- ❖ Internal ACL system

### **1.2.5 SEO Optimization**

- ❖ SEF URLs support including SEF components
- ❖ MijoSEF plugin
- ❖ Custom meta and keywords for every products
- ❖ Google analytics support

### **1.2.6 Designers & Developers**

- ❖ MVC system
- ❖ Easily extendable
- ❖ Templatable
- ❖ 100% CSS (tableless) design
- ❖ Easy to customize the output
- ❖ HTML & CSS override similar to Joomla's one.

### **1.2.7 Semantic Structure & Others**

- ❖ SSL support
- ❖ Internal search system
- ❖ RSS support (also Google Base)
- ❖ Built-in captcha system
- ❖ Social networks support (twitter, facebook, addthis)
- ❖ Bulk CSV import/export (products, categories etc.)
- ❖ Actively developed

### 1.3 MijoShop Requirements

These are the requirements expected from your web server. These are normally delivered by your hosting company.

#### PHP Setting

PHP 5.2.0 or higher

Register Globals: Off

Magic Quotes: Off

File Uploads: On

Session Auto Start: Off

#### PHP Extensions

GD: On

cURL: On

ZIP: On

#### You have to ensure that:

Joomla 1.5 Setting: System - Legacy plugin must be disabled

### 1.4 Obtaining MijoShop

You'll receive the download link via e-mail or download it from "My Downloads" page.

The "My Downloads" page URL: <http://www.mijosoftware.com/downloads/my-downloads>

### 1.5 MijoShop Installation

This section will teach you how to install MijoShop on your Joomla website.

Log-in as Administrator and access your Joomla Admin panel.

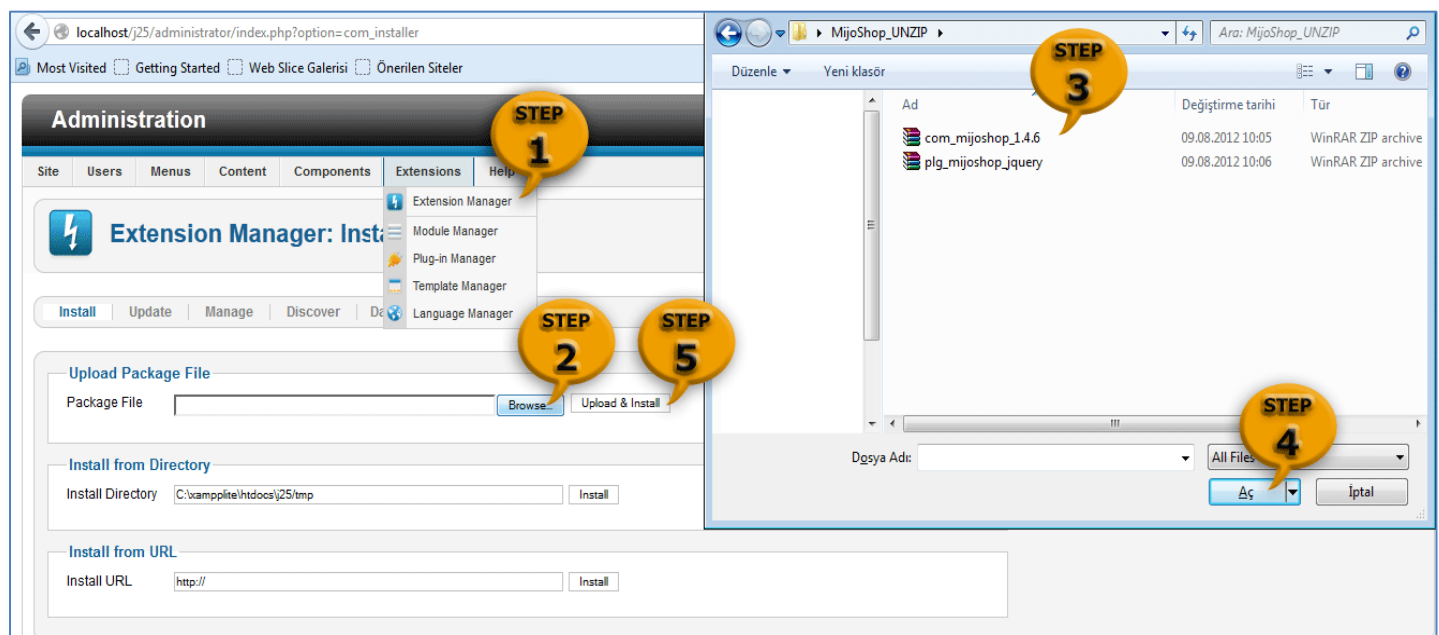

Diagram 1

As described in the screenshots above, complete all the following steps.

**Step 1:** Go to Extensions -> Extension Manager

**Step 2, 3, 4:** “Browse” and navigate to your MijoShop directory and select the Component (com\_mijoshop\_x.x.x.zip) which must be installed. Select it and then click Open.

**Step 5:** When the component opens, click Upload & Install, this step may take a while.

After the package file is installed in Joomla the screen as shown in diagram 2 is displayed in your Browser.

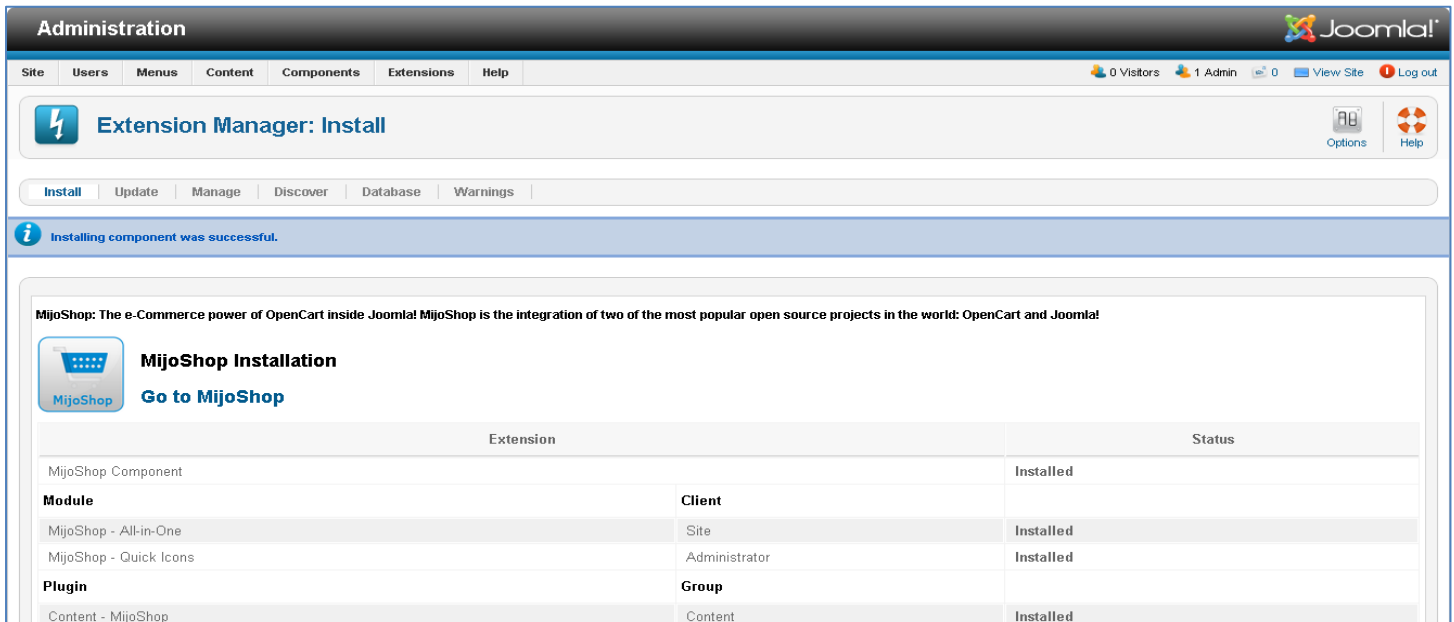

Diagram 2

**NOTE:** After the installing the component, it's necessary to install the System – MijoShop jQuery plugin and enable it, in order that MijoShop functions correctly.

## 1.6 MijoShop jQuery Plugin Installation

Go to Extensions -> Extension Manager in order to install the System – MijoShop jQuery.

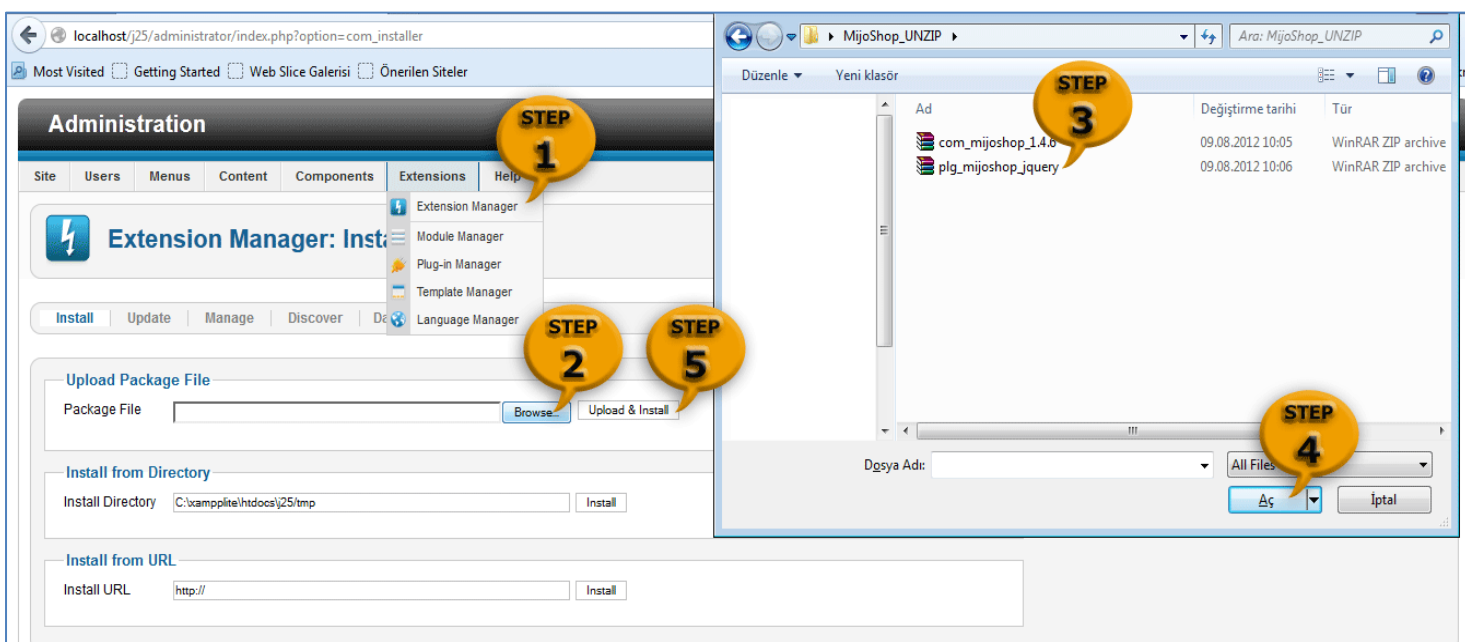

Diagram 3

Follow the steps described below:

**Step 1:** Click on Extensions - > Extension Manager

**Step 2,3,4:** Click “Browse” and navigate to your MijoShop directory and select the Plugin file (plg\_mijoshop\_jquery.zip) that must be installed. Select it and click Open.

**Step 5:** Click Upload & Install, this step may take a while. After the package file is installed the screen as shown diagram 4 in will be displayed in your Browser.

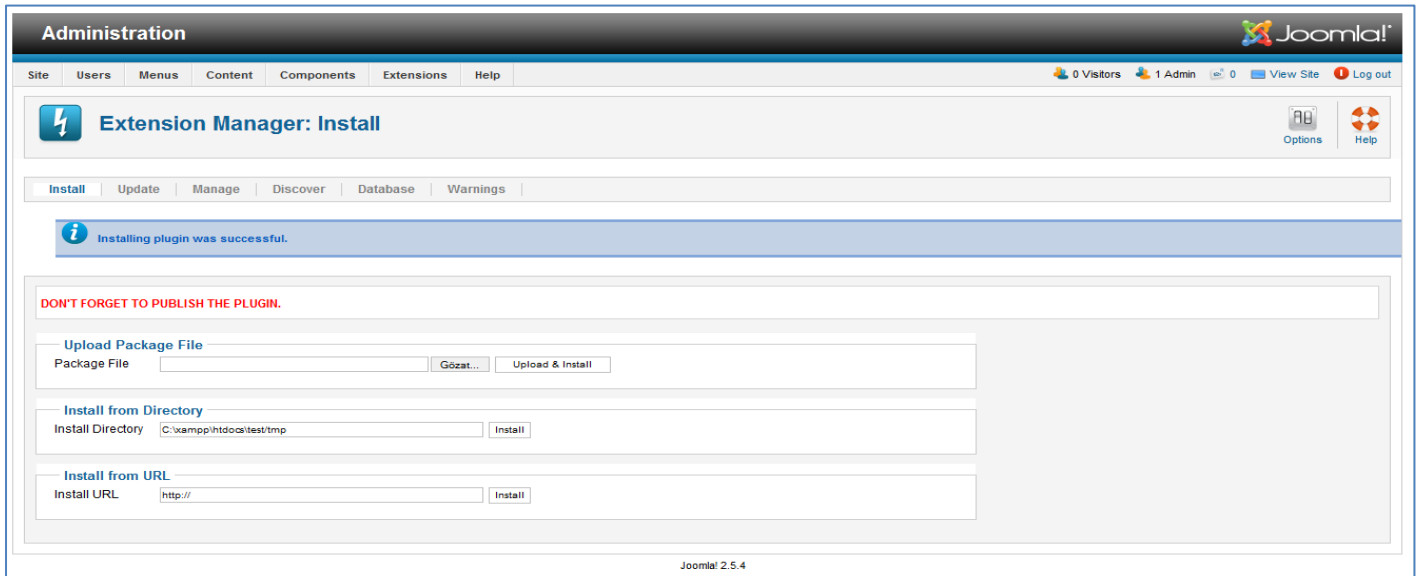

Diagram 4

Do the following to enable the Plugin. Then you will have to make the settings described below.

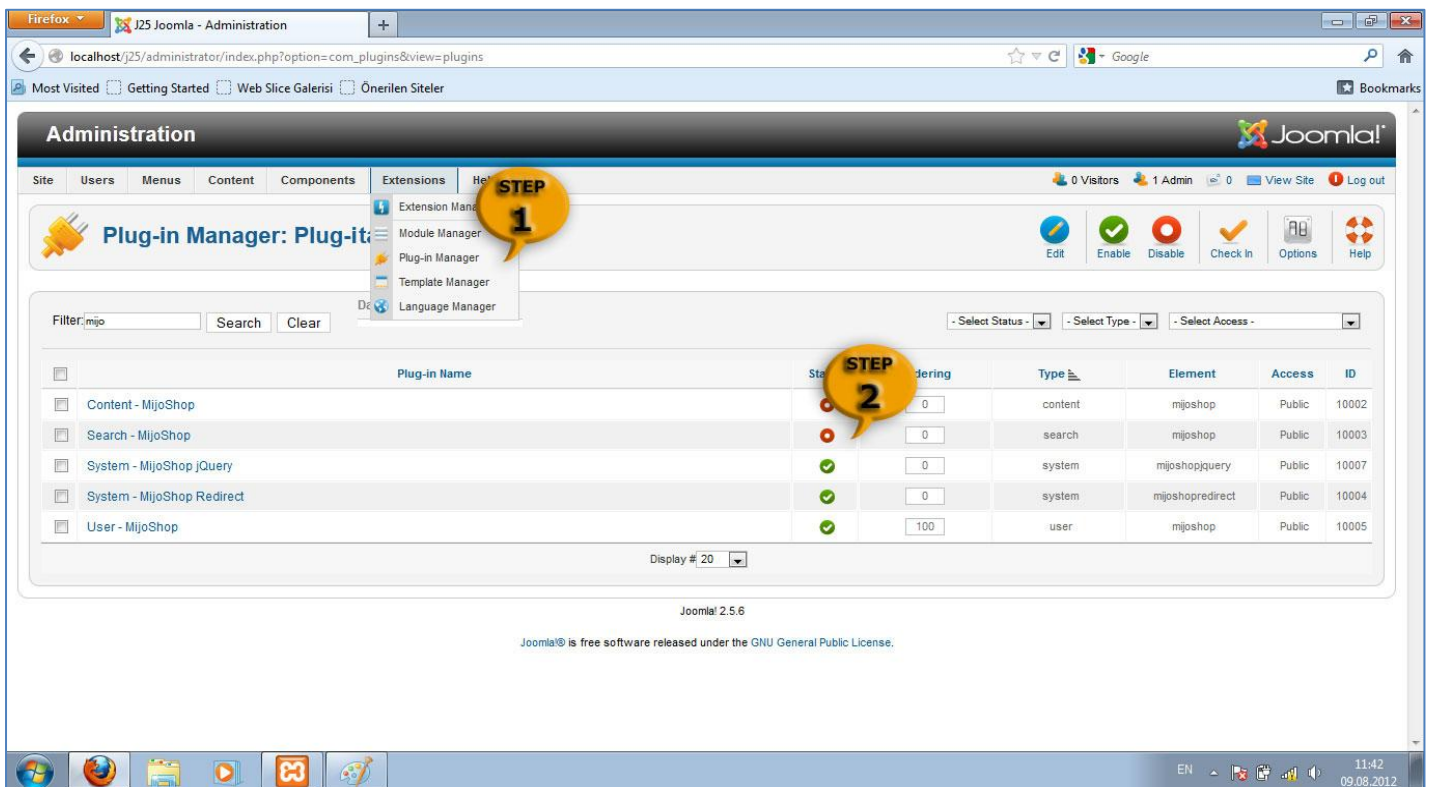

Diagram 5

On the screenshot above the plugin System – MijoShop jQuery is disabled. Locate the Status column and click of the red icon to enable the plugin. When you do Joomla will enable the plugin.

**NOTE:** The advanced search function is disabled, it can be activated following exactly the same steps but this time for Search – MijoShop.

Step 1: Go to plugin manager

Step 2: Press the Status icon to enable the plugin

When this is done the screen as shown in diagram 6 will be displayed in your Browser where it says that the plugin is successfully enabled.

## 1.7 The First Settings of MijoShop

After the MijoShop plugin installation is completed, it's necessary to insert the following information about the MijoShop site details which are related to General, Store, Local, Options and so on. i.e Data settings that MijoShop needs.

Go set this information within MijoShop, use Joomla admin panel -> Components ->MijoShop -> System -> Settings. In settings its simple to

- Give the store a name,
- Set the owner of the store
- Set such details as: address, e-mail ID, Telephone and Fax number

And so on, as shown in diagram 7.

**Diagram 7**

In the Settings section replace *Your Store* with a name for your store, select a template, choose the country that you are based in, choose its region / state and other such details.

Select the administration language, set the default currency, the default item number(s) per page of in the Front and Back-End, display the prices with tax or not, and so on. Once complete click Save to save this information.

If desired you can set and customize the store logo. Resize the default store logo. Set customize email IDs and various server settings via this interface.

## 1.8 Make A Menu Link For MijoShop

In this section, you will learn “How to assign a menu item to MijoShop” in order to display MijoShop within the Joomla content area.

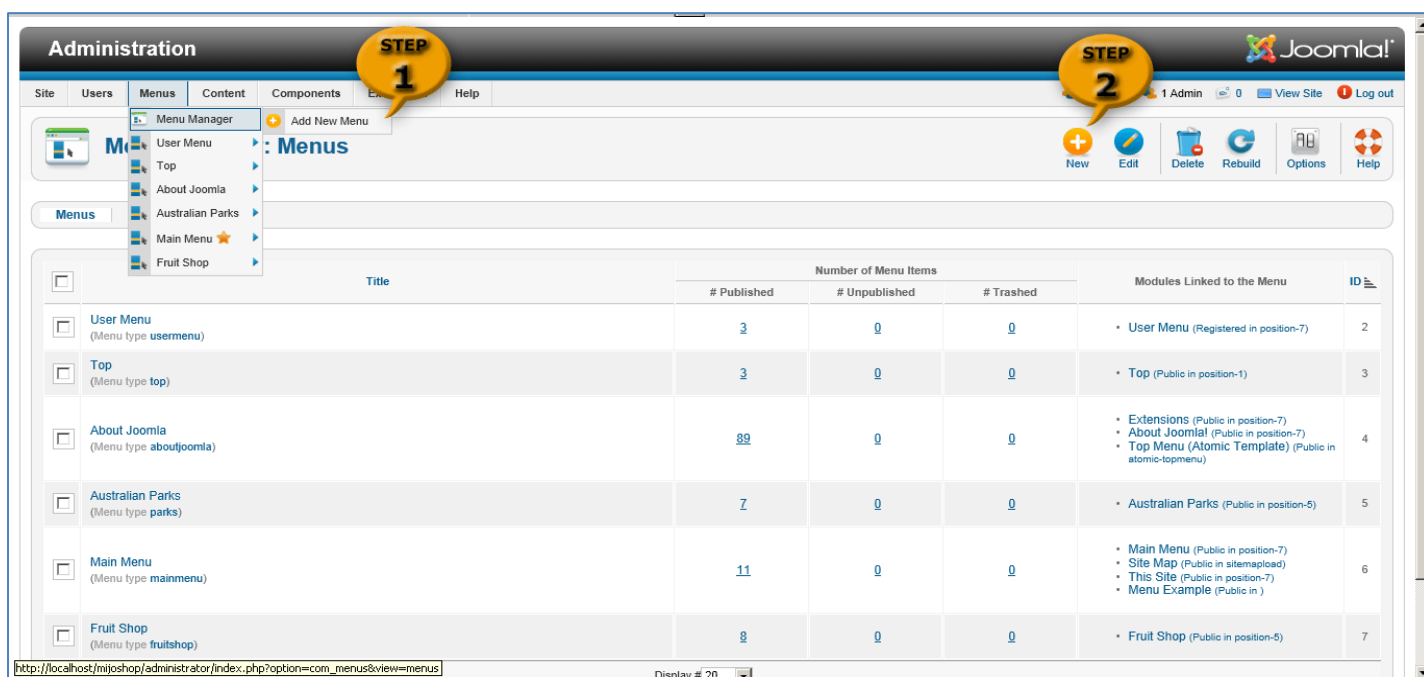

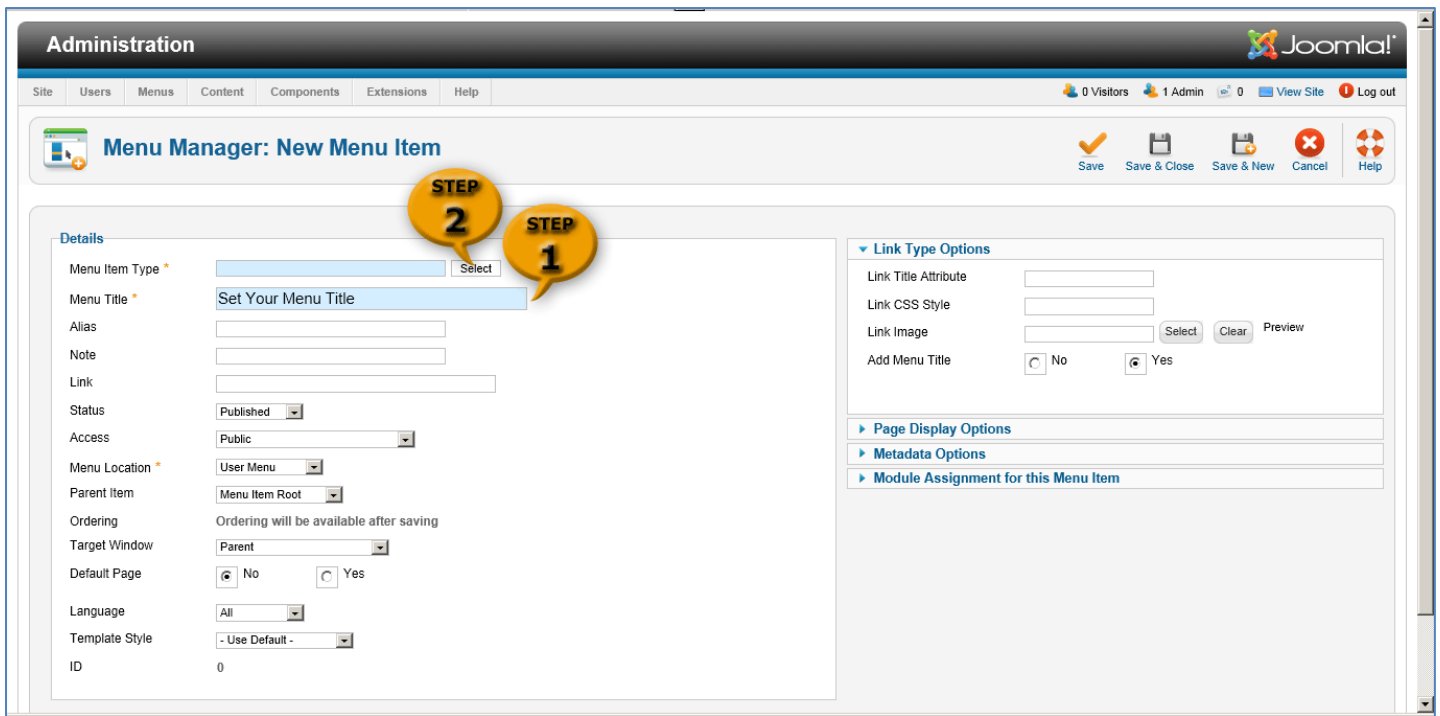

Diagram 8

To create a Joomla Menu item, which when clicked, will display MijoShop in the Joomla template content area, do the following:

Step-1: In Menus - > Click Main Menu

Step-2: In the screen that opens click Add New to add a new menu item the Joomla site as shown in diagram 8.

The screen as shown in diagram 9 is displayed in your Browser when you do.

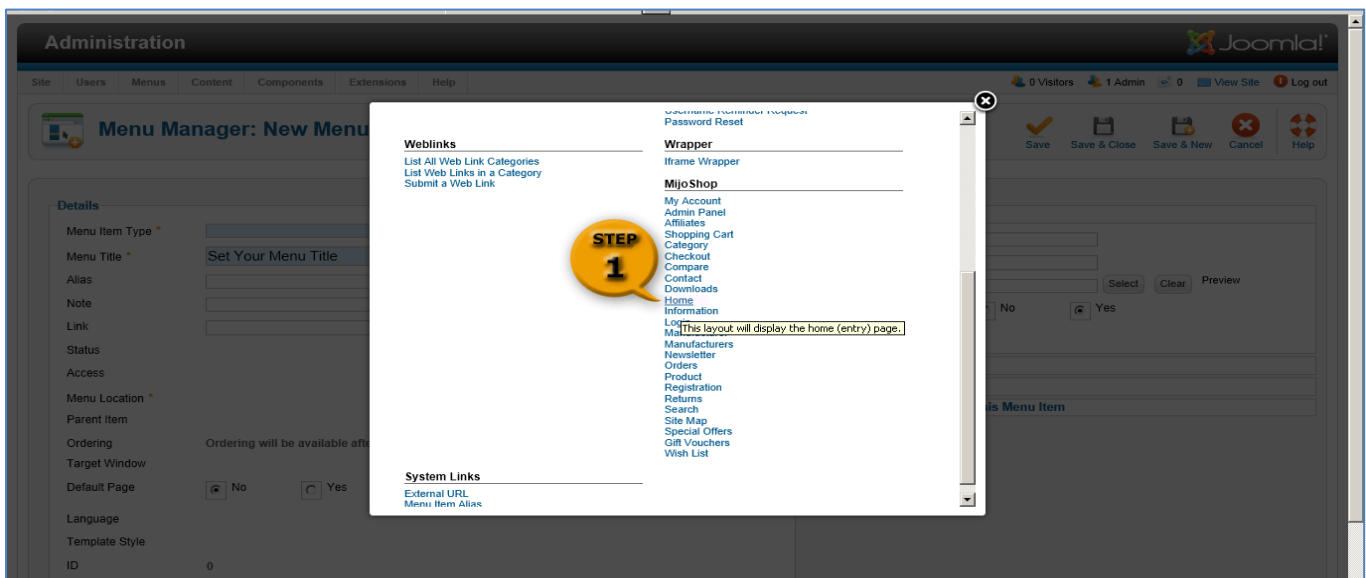

**Diagram 9**

Step1: Enter the Menu Item name you desire in the text box Menu Title.

Step2: Click Select adjacent to the text box Menu Item Type.

Both of these steps are clearly shown in diagram 9.

On click of Select the screen as shown in diagram 10, is displayed in the Browser.

**Diagram 10**

On click of Select, from the pop-up screen, select “Home” under the “MijoShop” head as shown in diagram 10.

**Administration**

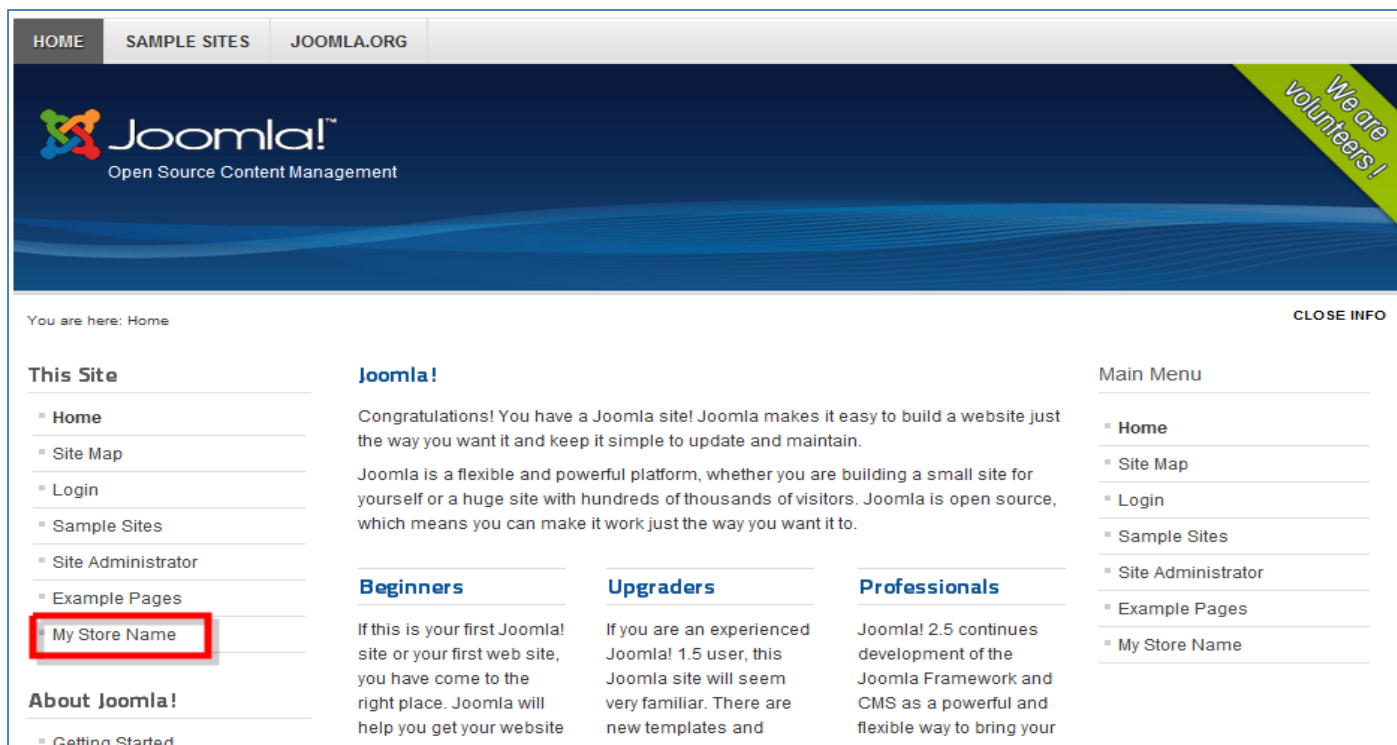

Diagram 11

The text box Menu Item Type will be automatically loaded with Home.

When that is finished, click Save & Close in the upper right hand corner.

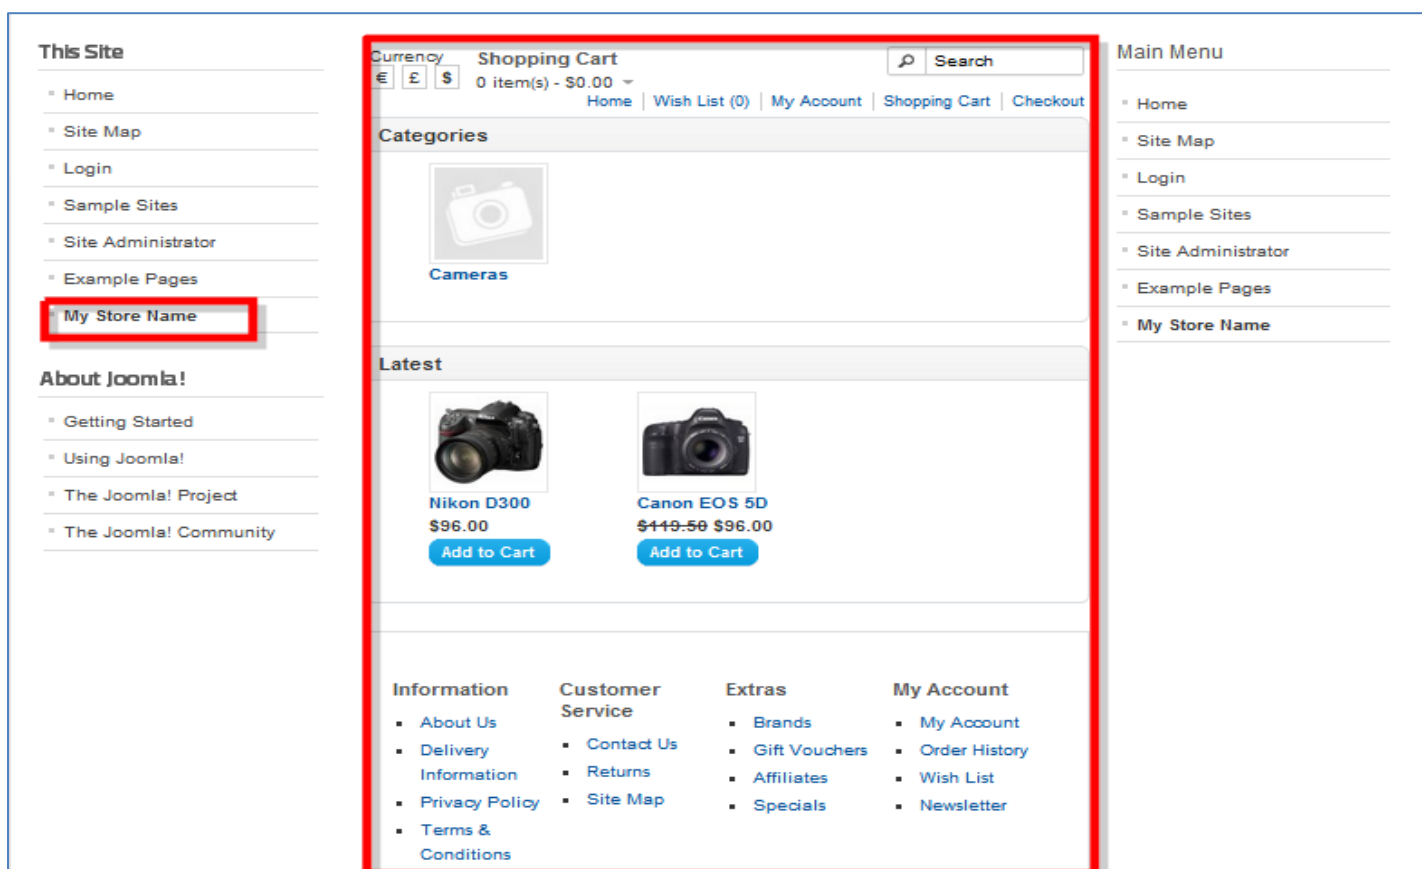

Both steps are shown in diagram 11.

Once these steps are finished, go to the website's Front-end ( i.e. Home page ) and check if your Store Name has been successfully added as a menu item or not as shown in diagram 12.

**Diagram 12**

When you on the menu item Your Shop Name a screen as shown in diagram 13 will be displayed in your Browser. The installation of MijoShop within your Joomla website is completed.

**Diagram 13**

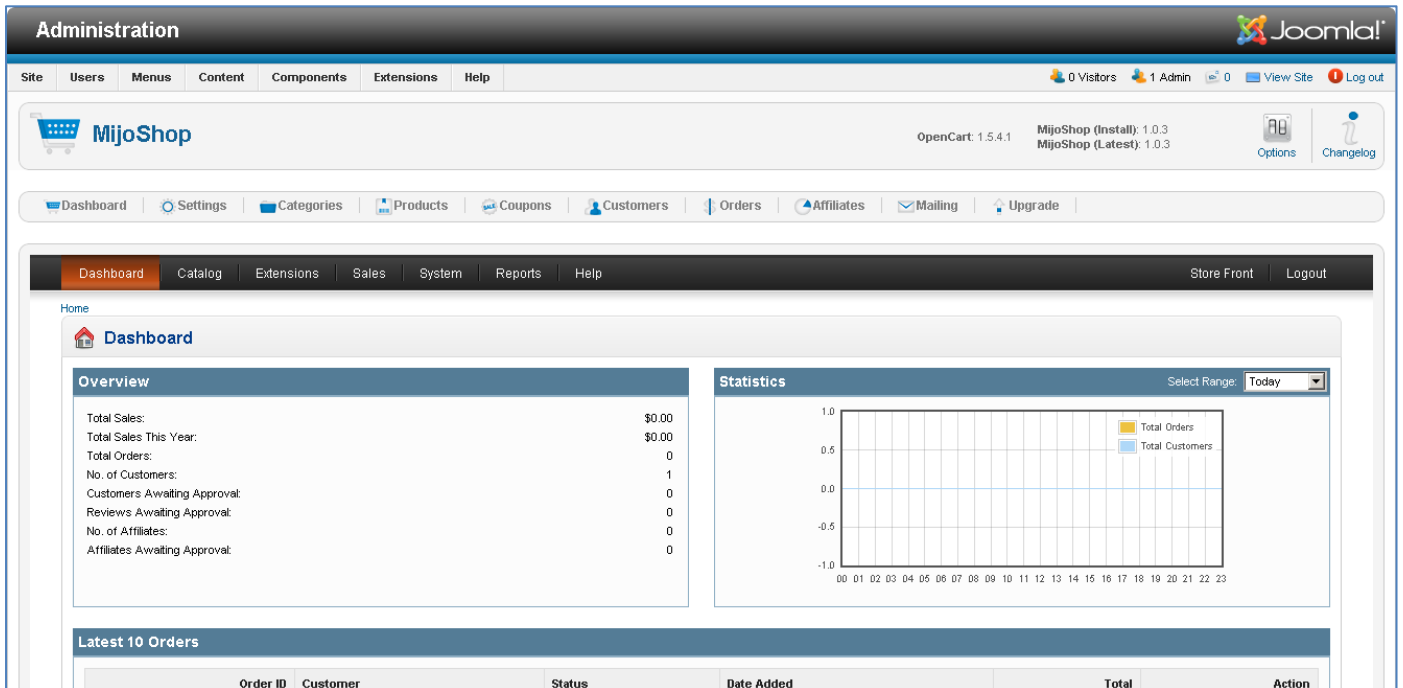

Now that your MijoShop plugin is installed and displayed successfully, the next section will discuss, describe and document the MijoShop Dashboard and its features.

## 1.9 The MijoShop Dashboard

From MijoShop Dashboard permits the viewing of:

- Total sales
- Total sales per year for the current year
- Total orders
- Number of customers
- Customers awaiting approval
- Reviews awaiting approval
- No of affiliates
- Number of affiliates awaiting approval

As shown in diagram 14.

**Diagram 14**

On the right section of the dashboard, view and compare the statistics of total orders, total customers by per day (today), weekly, monthly and per year.

At the bottom section of the Dashboard the details of the Latest 10 Orders can be viewed.]

The next part is about OPTIONS on top of the corner.

## 1.10 MijoShop Options

The options button has some settings for MijoShop. How to:

- Show/hide header widgets
- Show/hide footer links
- Show categories menu
- Load Plugins in MijoShop
- **Fix internet explorer or other cache issues.**
- **Change Mijoshop css button class.**
- **Enable several joomla comment plugin**

And so on.

As shown in diagram 15.

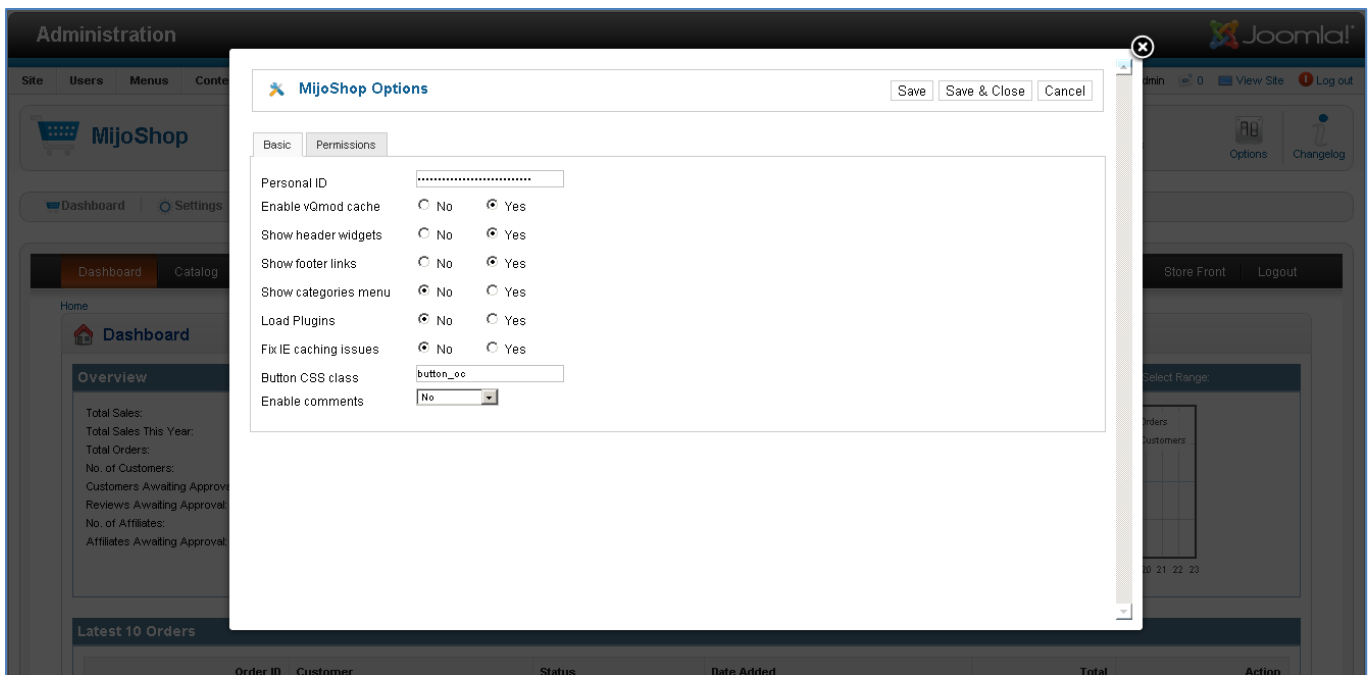

Diagram 15

## 1.11 Show Header Widgets

By clicking on the “Options” menu tab we are able to show/hide header widgets. If set to Show the header menus Home/Wish List/My Account/Shopping Cart/Checkout are shown in the front end.

## 1.12 Show Footer Links

When Footer links is set to Show this shows us Information/ Customer Service/ My Account in the front end as links in the footer section.

## 1.13 Show Categories Menu

When set to Show the categories menu is shown at the top of the store.

## 1.14 vQmod Cache

You may get more information about VQMod at the following links bellow:

<http://www.mijosoft.com/support/docs/mijoshop/faq/what-is-vqmod>

<http://www.mijosoft.com/support/docs/mijoshop/how-to/how-to-install-a-vqmod-extension>

## 1.15 Load Plugins

MijoShop plugin offers you the possibility to sell MijoShop products from every component. You may find more information at the link bellow:

<http://www.mijosoft.com/support/docs/mijoshop/how-to/how-to-use-the-content-mijoshop-plugin>

## 1.16 Fix IE caching issues

This option will fix some IE caching issues with Ajax, especially during the checkout process.

## 1.17 Button CSS class

Here you can enter the CSS class of your template for buttons. button\_oc is the default CSS class of MijoShop for buttons. Check the following article for more details:

<http://www.mijosoft.com/support/docs/mijoshop/how-to/how-to-change-the-buttons-css-style>

The front end Header and Footer positions are show in diagram 16.

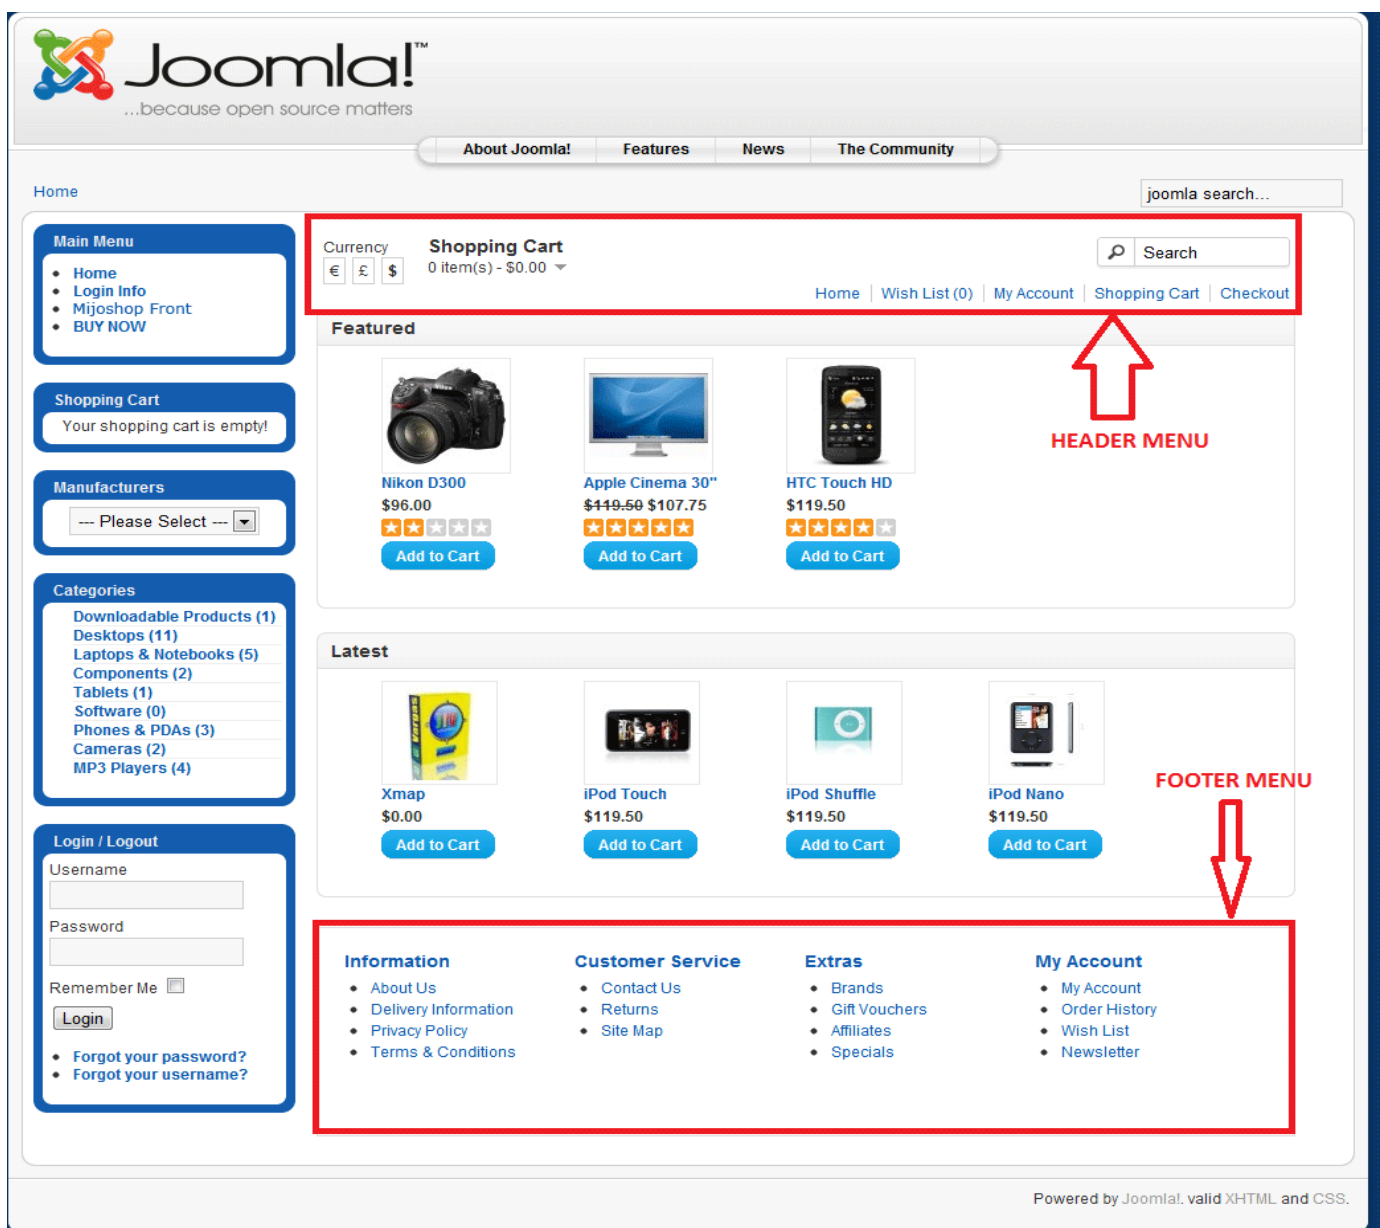

Diagram 16

## 1.18 How Install A Theme

**NOTE:** We use the latest version of OpenCart so make sure that the Joomla template is 1.5.1.x compatible.

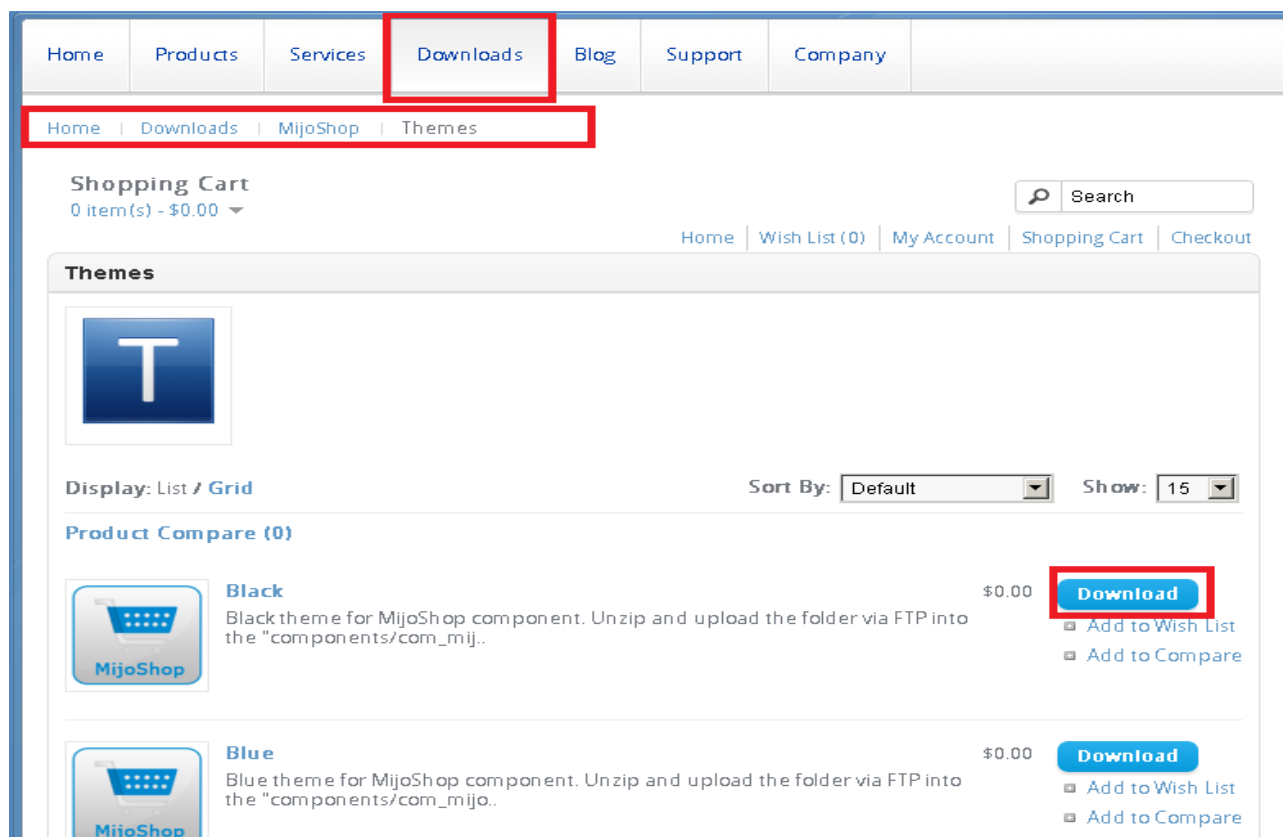

**NOTE:** The website template is the hardest to make compatible with MijoShop. While we've seen templates that are MijoShop compatible out-of the box, most templates require some custom work & patience.

There are many OpenCart themes available for free as well as for purchase. Regretfully most do not work directly ( i.e. out of the box ) with MijoShop so we recommend you to use our MijoShop themes or create your own theme by overriding the default theme.

This section will teach you - How to install a theme. Please use the following link:

<http://www.mijosoft.com/downloads/mijoshop/themes>

to download a theme(s) for MijoShop

**Diagram 17**

Locate Downloads among the top menu items in the page displayed in your Browser as shown in diagram 17. Select the theme(s) you desire and click Free Download. Save the download file to a folder on your hard disk.

Navigate to this folder and unzip the downloaded zip file there.

Run your FTP manager (Filezilla e.g) and connect to your FTP server.

After a successful connection navigate to:

components\com\_mijoshop\opencart\catalog\view\theme

Upload all the unzipped files of the MijoShop theme into this folder

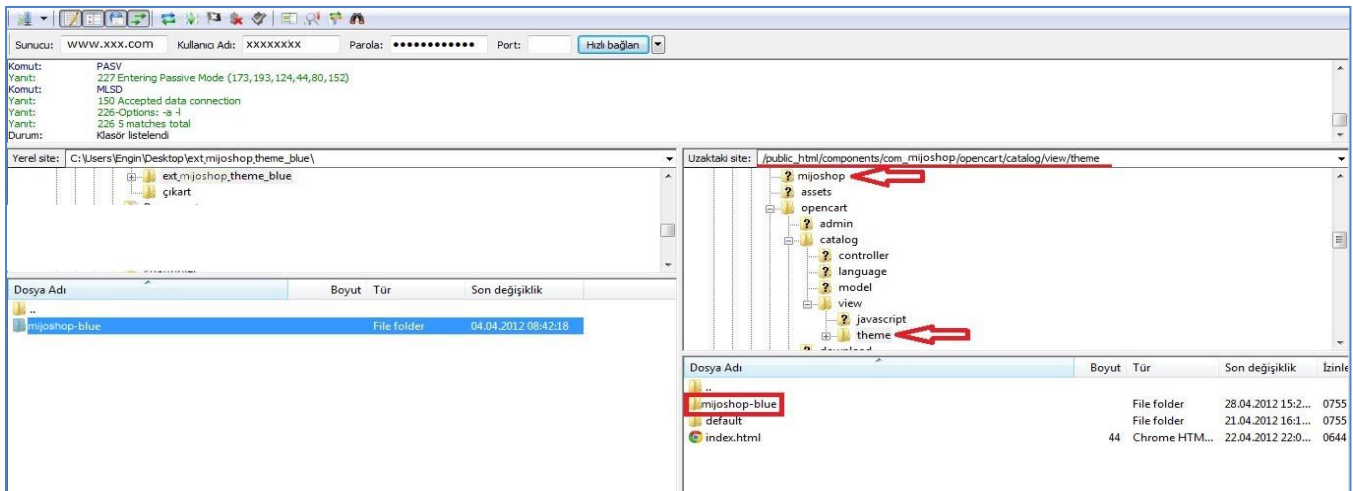

Diagram 18

Now do the following steps, in the order shown to apply the new theme to MijoShop.

Go the MijoShop Admin Dashboard => Components => MijoShop => System => Settings =>

In the settings page, from the drop down list box Template, select the template you want as shown in diagram 19.

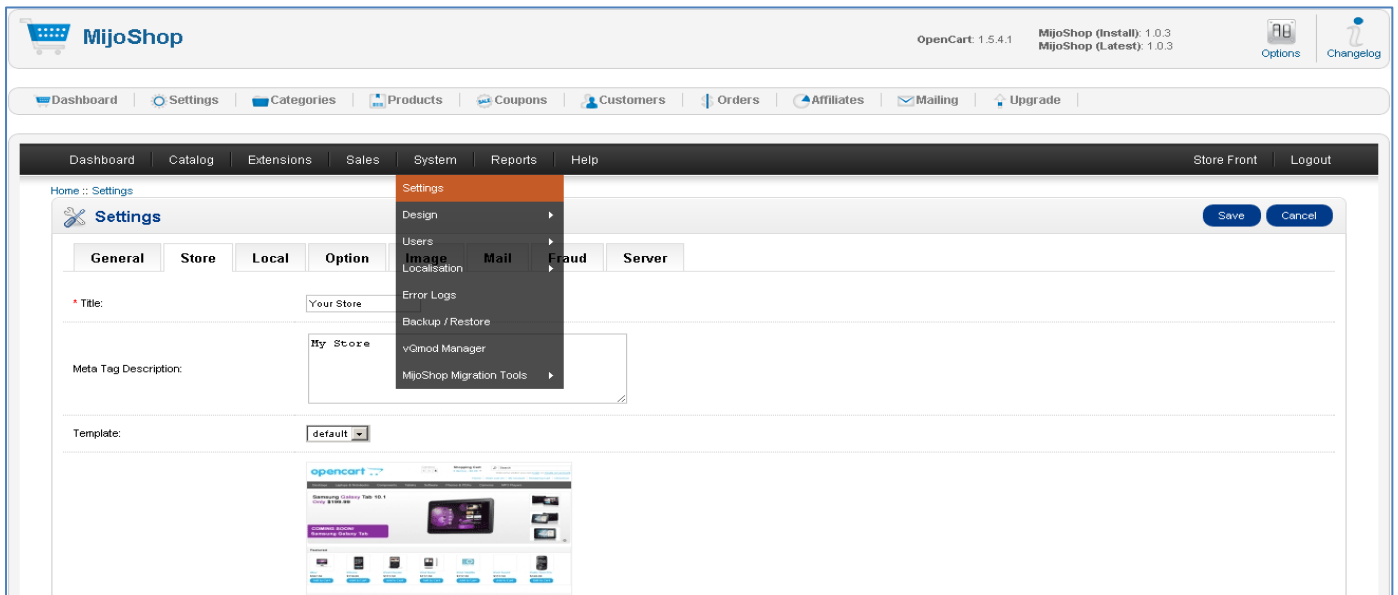

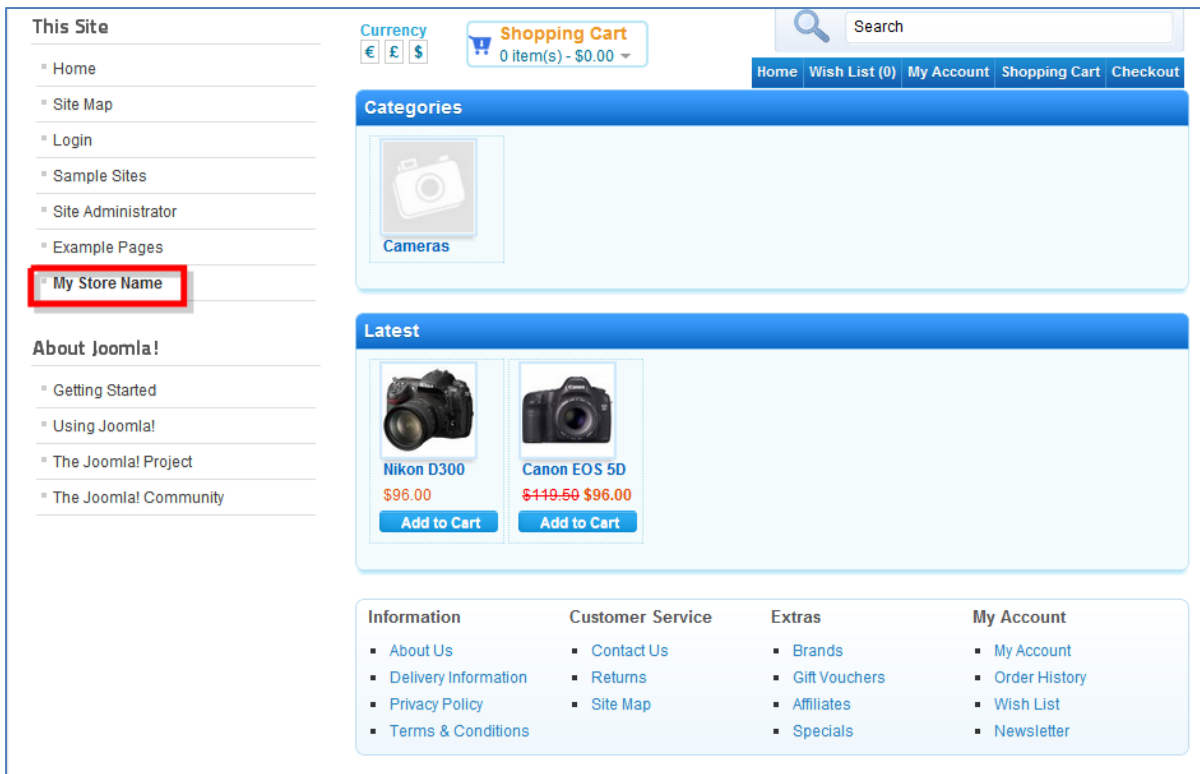

Diagram 19

Now go back to your Joomla website Front-End and click the - MY STORE NAME - menu link as shown in diagram 20.

**Diagram 20**

The new template is applied to MijoShop.

After having completed these steps do the following:

Go to - MijoShop => Extensions => Modules to install the necessary MijoShop modules.

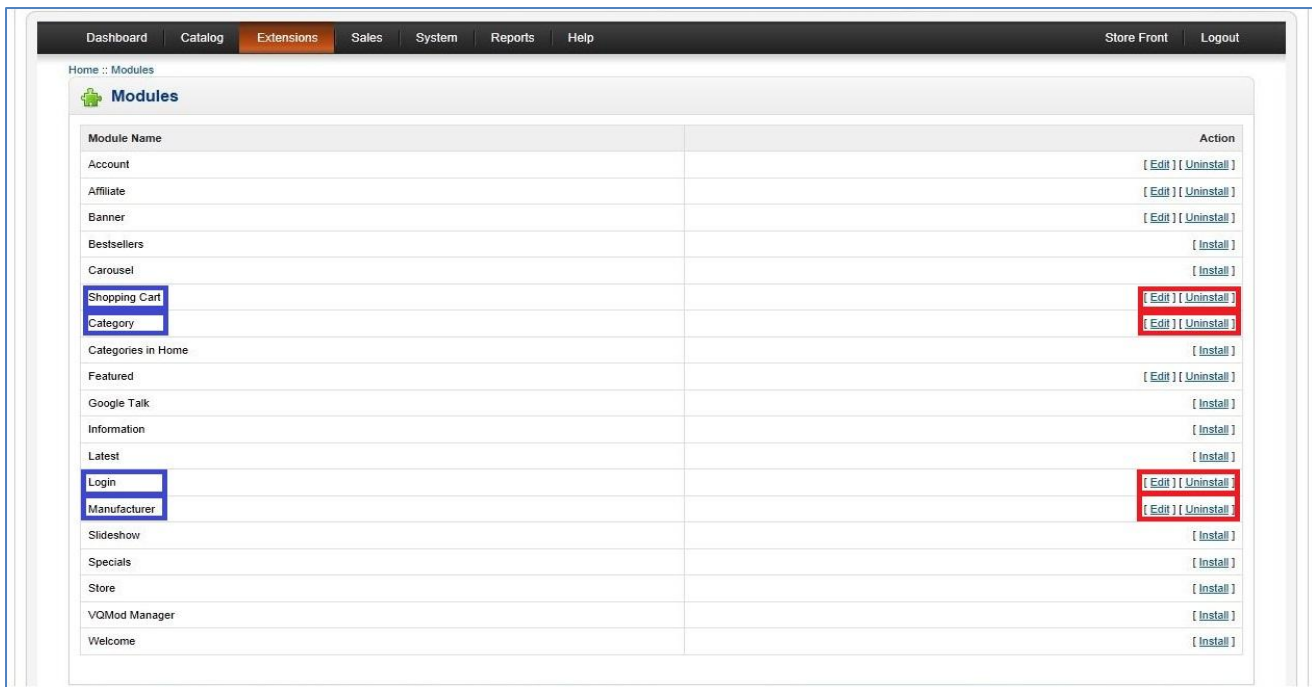

These modules usually are:

- Login
- Shopping Cart
- Categories
- Manufacturers

If a module is not installed the link displayed will be Install.

If a module is already installed the link displayed will be Edit / Uninstall.

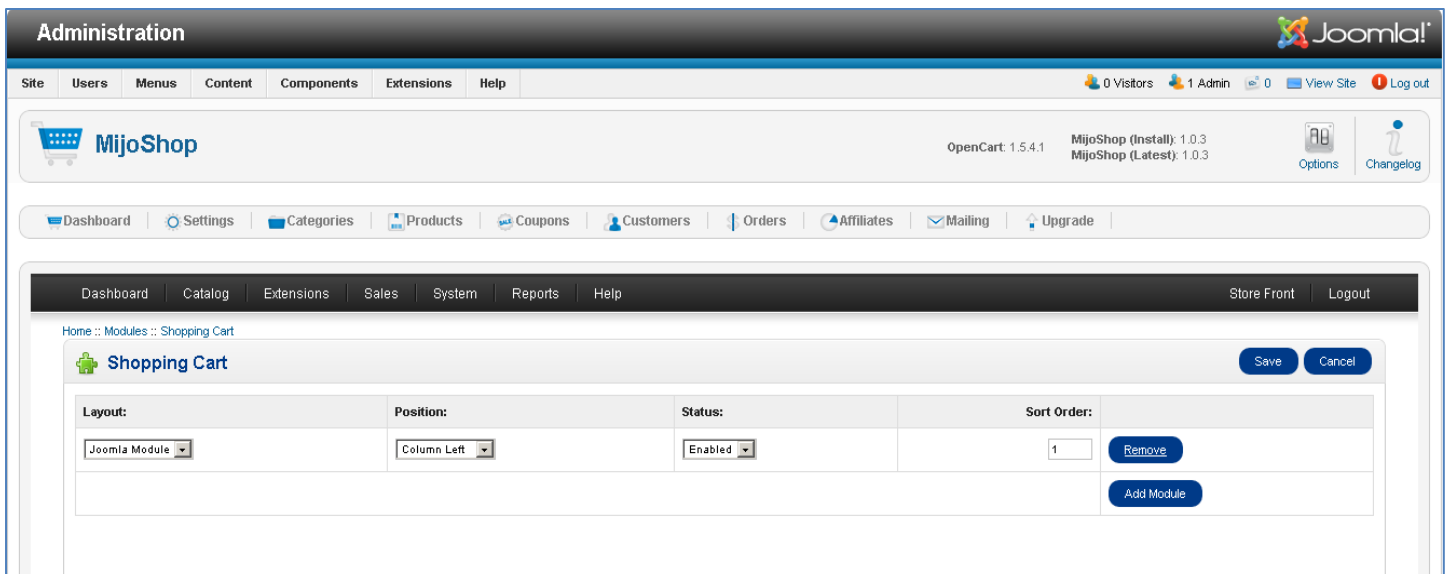

As shown in diagram 21.

**Diagram 21**

After installing the modules that are required edit these modules one by one. Let's take the Shopping Cart module as an example.

Enable / Disable attributes as desired and finally click Save in the top right hand corner as shown in diagram 22.

**Diagram 22**

Once we've installed and edited all the modules we require, generally the Login, Shopping Cart, Categories and Manufacturers modules, go back and refresh the front end of the website. It should look like diagram 23.

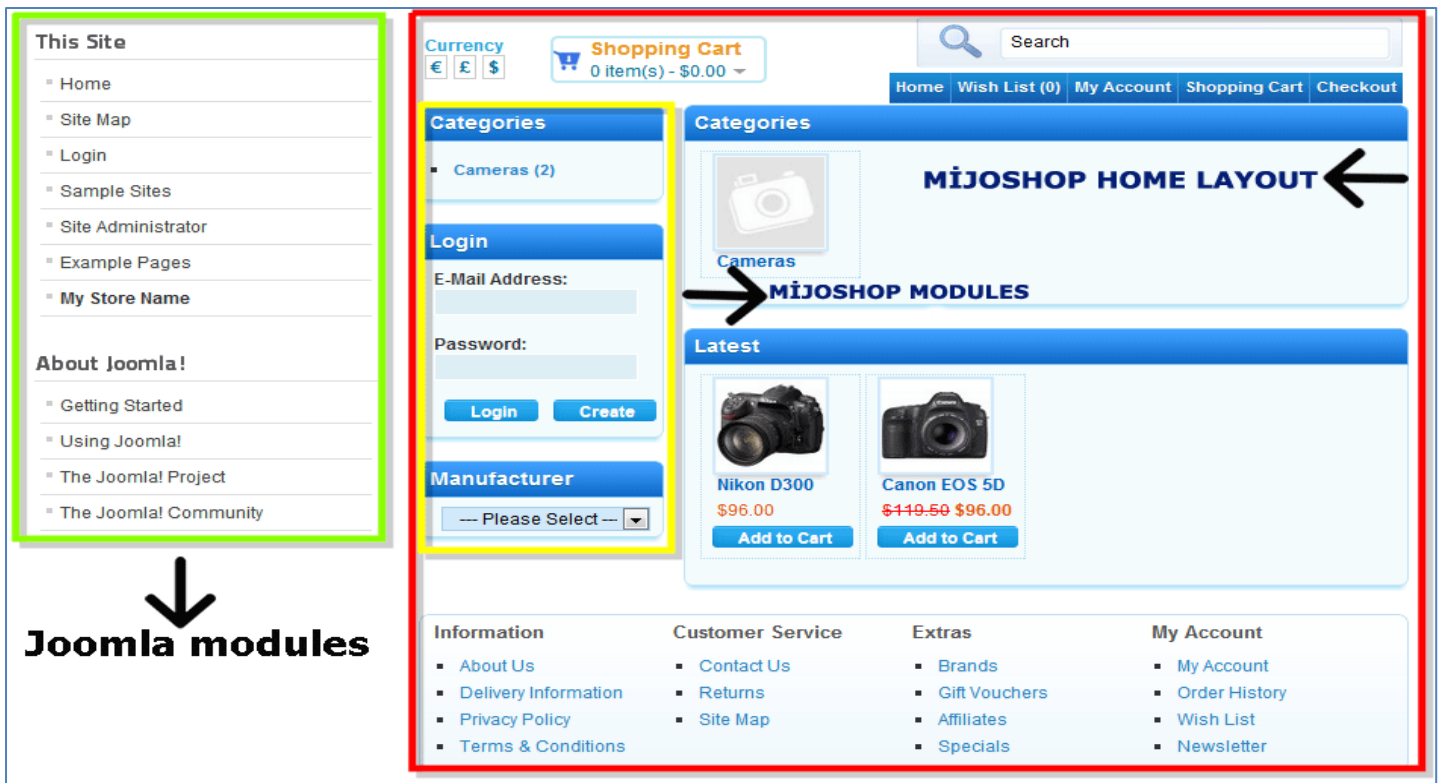

Diagram 23

Next disable the Main Menu module of Joomla to view MijoShop – full screen. To do the following:

Login to the Joomla Admin panel:

Admin Panel -> Extensions -> Module Manager and disable “Main Menu”.

As shown in diagram 24.

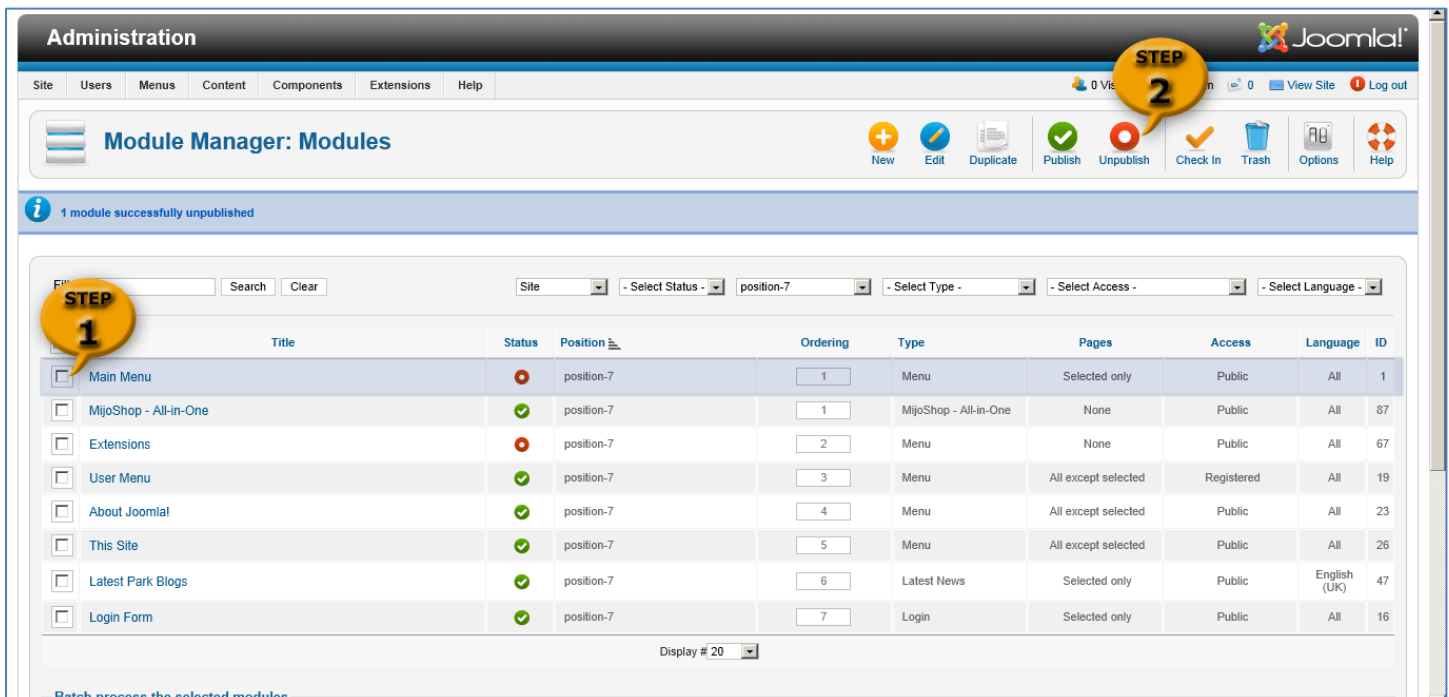

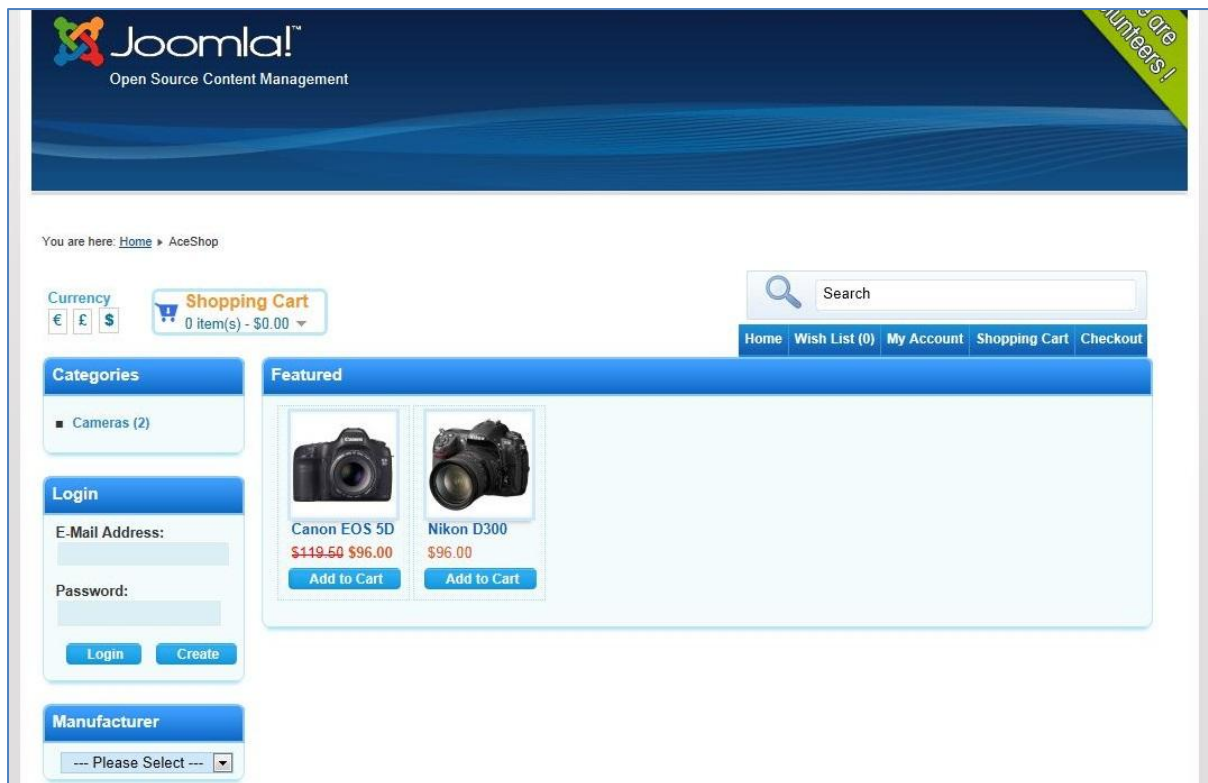

Diagram 24

The front page of the website will now look like the one shown in diagram 25.

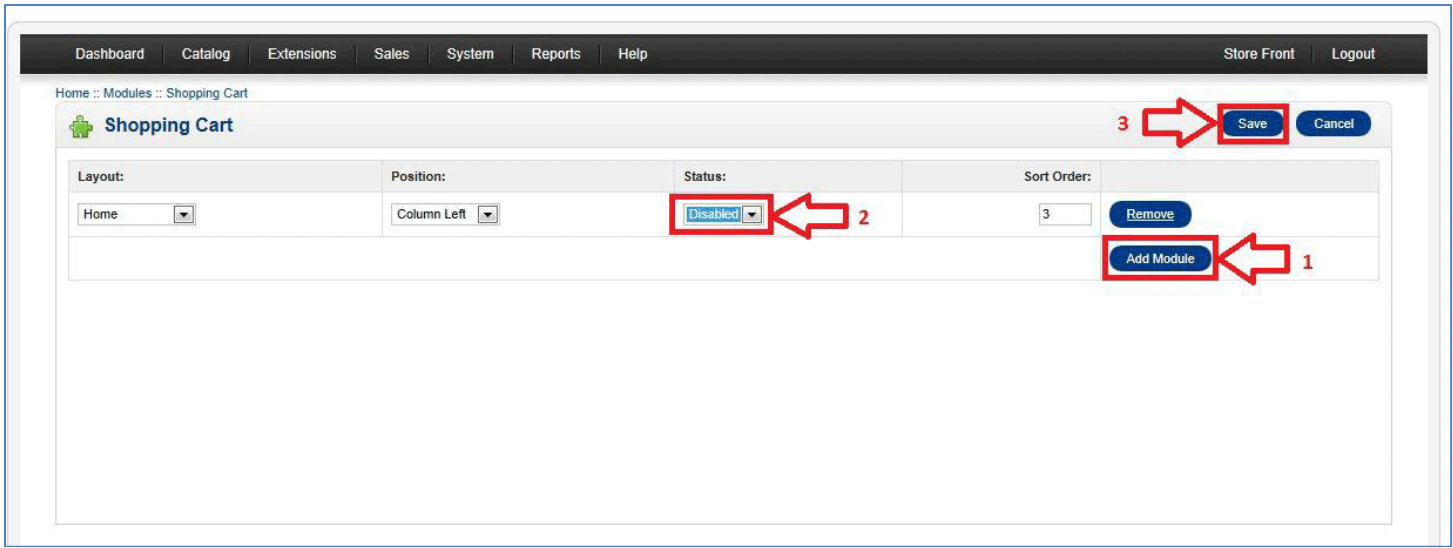

**Diagram 25**

MijoShop has now been successfully installed, configured and setup ready for use.S

**NOTE:** While it visually appears that MijoShop has taken over Joomla completely, any Joomla module can be applied and setup.

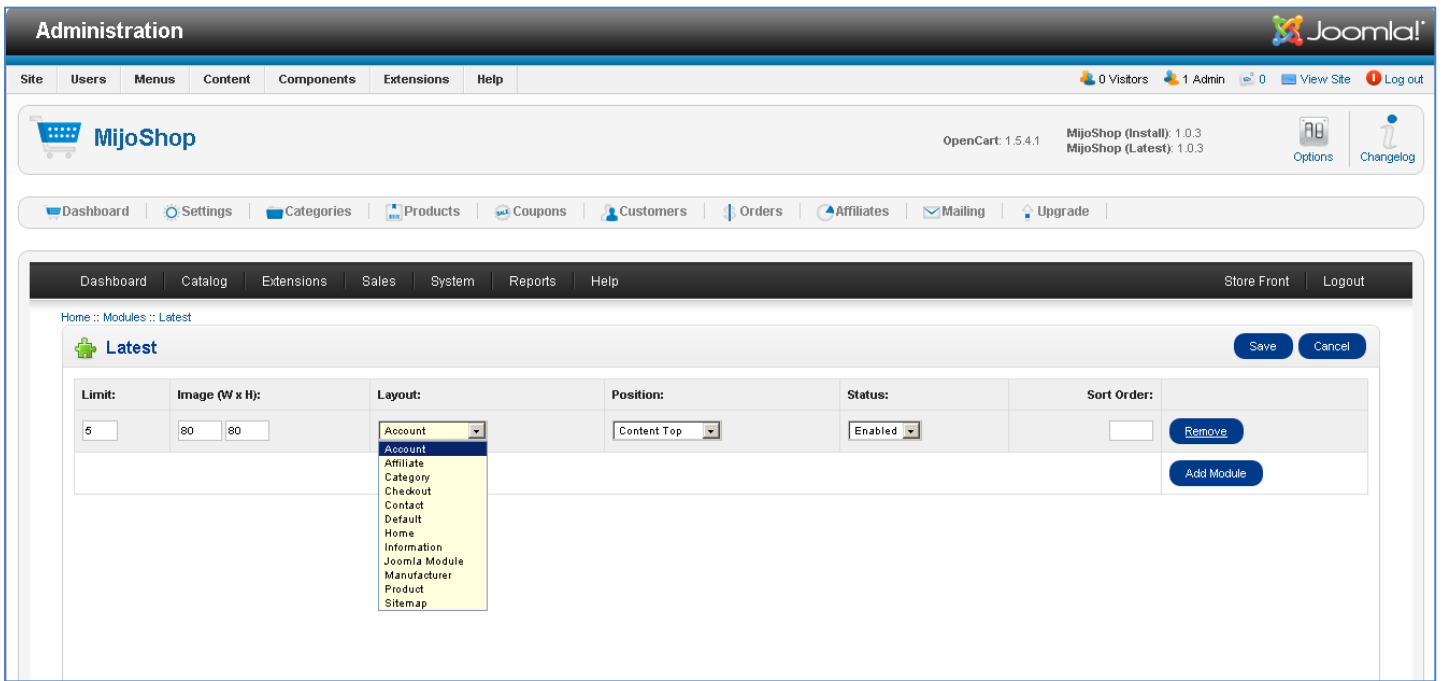

***“How to show an OpenCart module like a Joomla module?”***

Go to MijoShop =>Extensions =>Modules as shown in diagram 26.

**Diagram 26**

Make all the necessary settings to the related module and set the Layout of the module as shown in diagram 27.

**Diagram 27**

Next go to Joomla Extensions => Module Manager => MijoShop-All-in-one (mod\_ayelshop) and make the required edits on the MijoShop module as shown in diagram 28.

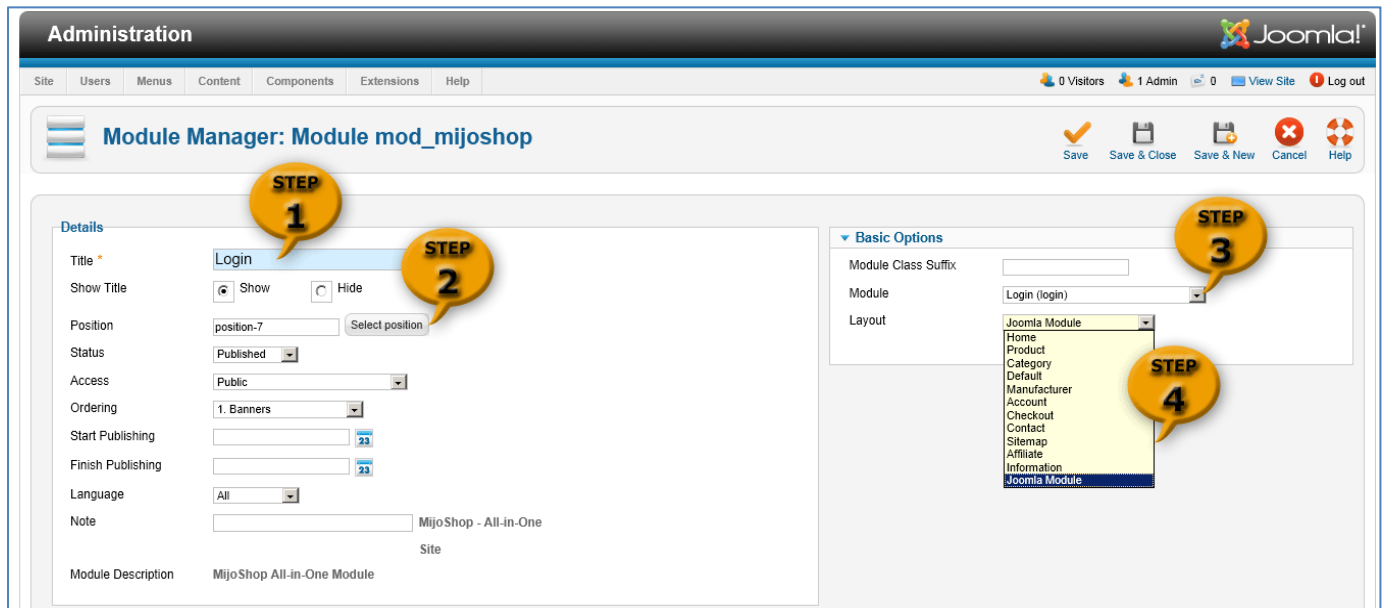

Diagram 28

Then refresh the Home page of MijoShop. See the changes displayed as shown in diagram 29.

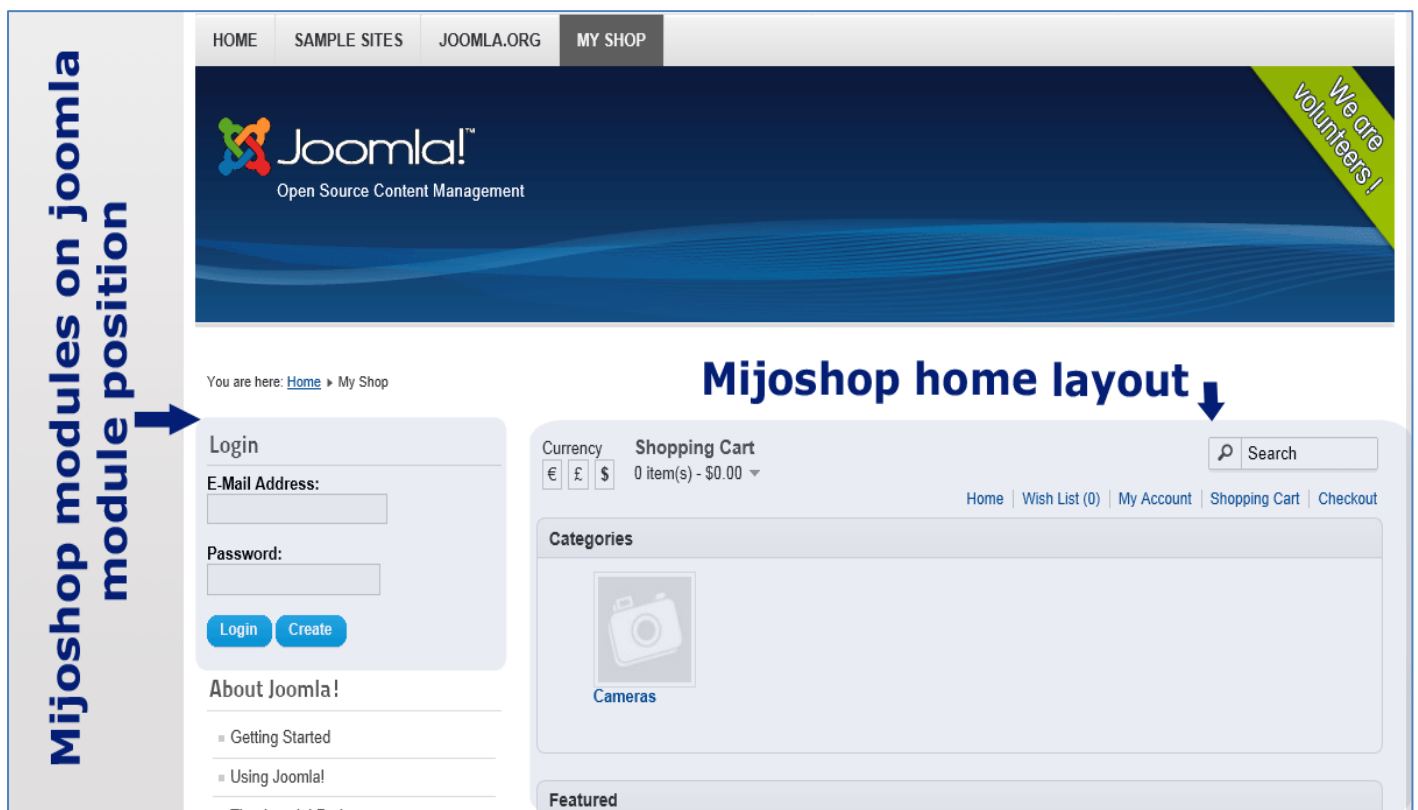

Diagram 29

## 1.19 Adding Products To MijoShop

Learning how to add products is probably one of the more important aspects, of running a MijoShop store. After all, if you cannot add a product and have it display in your MijoShop store how are you going to sell this product?

This section will describe in detail the steps you need to take to add a product to your MijoShop store.

**NOTE:** It is a good idea to have a grasp on [how to add categories](#) before you add a product, because you're probably going to want to add a product to a particular category. It is not required that you do this, but it helps keep your store organized.

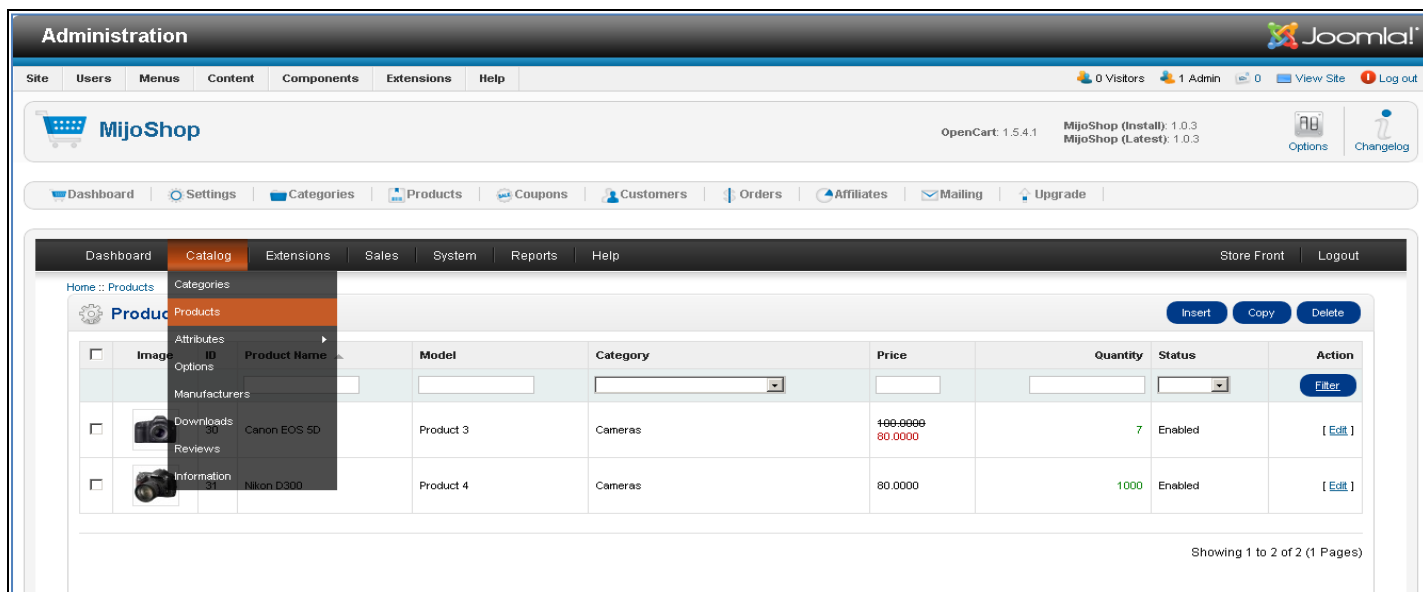

Diagram 30

To add a product to MijoShop:

- 1- Sign in to your administration panel.
- 2- Hover over the **MijoShop => Catalog** menu item and select **Products**
- 3- To add a new product, click **Insert** at the top right hand side of the page

The page as shown in diagram 31 will be displayed in your Browser.

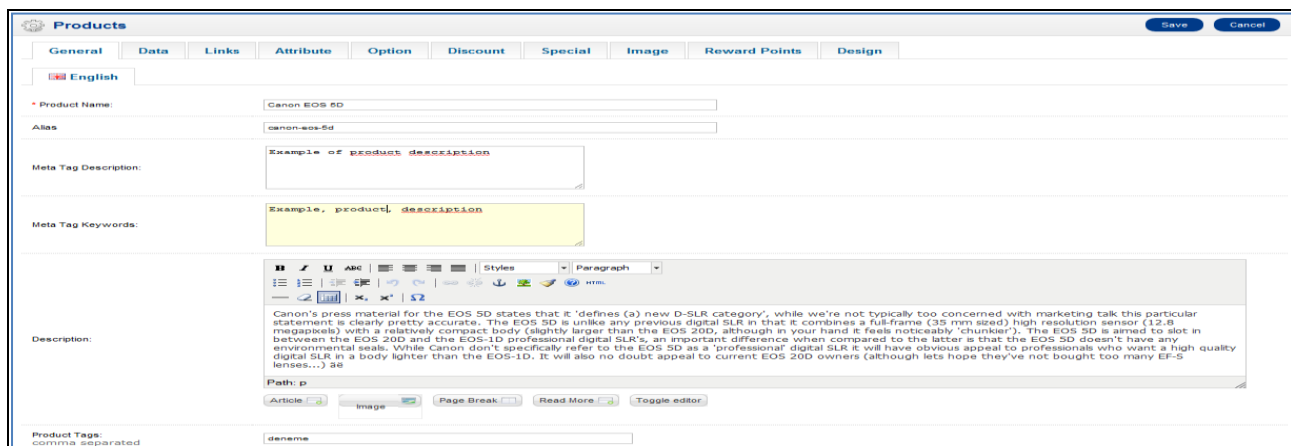

Diagram 31

## 1.19.1 THE GENERAL TAB

### 1.19.1.1 Product name

Enter the name of the product here. This field is required.

### 1.19.1.2 Meta Tag Description

The Meta tag description and appears in the header of your website. The text is not visible anywhere in the page itself. To however this text may be visible in search engine results pages underneath the link when people search for your store using Google, Yahoo, or Bing. Just describe what the product is. It is recommended that you use 160 characters or less.

### 1.19.1.3 Meta Tag Keywords

The Meta tag description and appears in the header of your website. The text is not visible anywhere in the page itself. It is used by some search engines, but is not visible as text. If the product was, for example, an iPhone, you would enter keywords such as: phones, iPhone, Apple, iOS, iPhone4, iPhone 5, etc. You'll want to separate each keyword with commas (as was shown).

### 1.19.1.4 Description

The description text of the product that gets entered here will appear in the description tab box (if the current theme you are using supports this) and will contain information on the product and further details about it. You can put whatever you like in here. You can enter text, HTML, and even embed Flash if you like.

### 1.19.1.5 Product Tags

Enter tags to describe the product. Tags are generally words that you have used in your description of the product that people might enter into a search engine to find your product. For example, a Mac book, might have tags such as laptop, Mac, iOS, iTunes or other descriptive tags. Tags are sometimes shown in the web page. It just depends on whether or not you are using a theme that displays the tags.

| Products  |      |  |           |        |          |         |
|---|------|--|-----------|--------|----------|---------|
| General   | Data | Links  | Attribute | Option | Discount | Special |
| * Model:  |      | Product 3  |           |        |          |         |
| SKU:  |      |  |           |        |          |         |
| UPC:  |      |  |           |        |          |         |
| Location:   |      |  |           |        |          |         |
| Price:  |      | 100.0000   |           |        |          |         |
| Tax Class:  |      | Taxable Goods  |           |        |          |         |
| Quantity:   |      | 7  |           |        |          |         |
| Minimum Quantity:<br>Force a minimum ordered amount                 |      | 1  |           |        |          |         |
| Subtract Stock:   |      | Yes  |           |        |          |         |
| Out Of Stock Status:<br>Status shown when a product is out of stock |      | 2 - 3 Days   |           |        |          |         |
| Requires Shipping:  |      | <input checked="" type="radio"/> Yes <input type="radio"/> No  |           |        |          |         |
| Image:  |      | <br><a href="#">Browse Files</a>   <a href="#">Clear Image</a> |           |        |          |         |
| Date Available:   |      | 2009-02-03   |           |        |          |         |
| Dimensions (L x W x H):   |      | 0.00 0.00 0.00   |           |        |          |         |
| Length Class:   |      | Centimeter   |           |        |          |         |
| Weight:   |      | 0.00   |           |        |          |         |
| Weight Class:   |      | Kilogram   |           |        |          |         |
| Status:   |      | Enabled  |           |        |          |         |
| Sort Order:   |      | 0  |           |        |          |         |

Diagram 32

## **1.19.2 DATA TAB**

### **1.19.2.1 Model**

Enter a unique model number of the product here. This field is required. This have any value. For example, if it is a shirt the model number might be CLOTHING001234. Or you might have a strictly numerical code such as 1234567890. It doesn't matter what you put here just as long as it's unique and is not the same as another product.

### **1.19.2.2 Price**

Set the price of the product here (e.g. 19.99).

### **1.19.2.3 Tax Class**

If you don't plan on charging any taxes you can set the tax class to "None" in the drop-down. If you do, you can set this setting to the particular tax class that you have set up in MijoShop.

### **1.19.2.4 Quantity**

Set the number of items that you have in stock here. The quantity will decrease after each purchase if you have the subtract stock and setting set to a Yes (see below). You will want to keep track of your stock. So when you get a new supply of stock in you'll want to add it to the number of current items you have in stock here.

### **1.19.2.5 Minimum Quantity**

If you wish to force customers to purchase a minimum number of items, specify the minimum number of items here. So for example if you want the customer to purchase a minimum of five t-shirts, for example, you would set the value here to 5.

### **1.19.2.6 Subtract Stock**

If you wish to track stock select "Yes," otherwise select "No."

### **1.19.2.7 Out of Stock Status**

This field sets the message that the customer will see in the webpage when is no more stock left. The good thing is that this will be done automatically for you. There are ways you can configure stock status messages if you require different messages to be displayed for different products.

## **1.19.3 Requires Shipping**

this setting sets whether or not the user requires shipping. You'll want to set this to No if the product using downloadable product or the user will come and pick up the product in the store.

### **1.19.3.1 SKU**

A SKU is a "Stock Keeping Unit," a unique and arbitrary number for this product. This can be any value that you want that makes sense within the system of tracking that you have set up for inventory. This can be the same value as the model number or it can be something different if you have a different system set up.

### **1.19.3.2 UPC**

Universal Product Code, a unique code and manufacturer number assigned by <http://www.gs1.org/> The UPC is a way to standardize product tracking numbers across international borders.

### **1.19.3.3 Location**

Set the location of the product here.

#### **1.19.3.4 SEO Keyword**

If you have [SEO keywords](#) enabled, you can enter a unique key word here that will make up the URL of your category. Be sure that you do not choose a keyword that is the same as another category, manufacturer, or product! [Click here](#) for more information on [SEO](#) keywords.

#### **1.19.3.5 Image**

In this location you can also have an image. The image will be visible as the main image when people go to the product page. You use the MijoShop image uploader UI to add images. Note that there is also an “Image” tab where you can add additional images. How all of these images are displayed depends on the template/theme that you are using.

#### **1.19.3.6 Data Available**

Set the date when you want the product to show up on your site. It will not be visible to customers otherwise but if you plan on having the product available at an upcoming future time, you could set this here.

#### **1.19.3.7 Dimensions(L x W x H)**

If you ship by a method that charges by package dimensions, the length, width and height of the product can be entered in here. Note that this is dependent on the Length Class setting (see below).

#### **1.19.3.8 Length Class**

This is the unit of dimension that gets used to measure packages. Dimensions are inches, millimeters etc. If you are outside of the United States you are probably using the metric system. If you are inside the United States, but shipping internationally, you might want to set this value to metric units to keep things consistent across international borders. This value also depends on the shipping company that you use as well.

#### **1.19.3.9 Weight**

If you ship your products using a shipping company or method that charges by weight, you can enter the weight of the product here. It will be used to calculate shipping.

#### **1.19.3.10 Weight Class**

This setting sets what unit is used to weigh various items. This setting could be set to pounds or kilograms. Make sure that unit you use coincides with the shipping company or method you are using to ship your products. It will make your life a lot easier.

#### **1.19.3.11 Status**

Select “Enabled” for product to appear in your store, or Disabled to hide products in your store. This allows for quick on/off toggling on whether or not a product is displayed in your store.

#### **1.19.3.12 Sort Order**

The sort order setting sets the order that the product will appear in when it is displayed in a list of a particular category. So for example, if the product was an iPhone, and the sort order was set to 1, the iPhone would be one of the first items displayed in the “Phones” category page of a MijoShop store.

The screenshot shows the 'Products' form with the 'Links' tab selected. The form includes the following sections:

- Manufacturer:** A dropdown menu showing 'Canon'.
- Categories:** A list with checkboxes for 'Test Category' and 'Cameras', both of which are checked. Below the list is a link that says 'Select All / Unselect All'.
- Stores:** A list with a checkbox for 'Default', which is checked.
- Downloads:** An empty text input field.
- Related Products: (Autocomplete):** A text input field containing 'Nikon D300'.

At the top right of the form, there are 'Save' and 'Cancel' buttons.

**Diagram 33**

## 1.19.4 LINKS TAB

The links tab categorizes different products under respective categories as well as connects different products together as related items

### 1.19.4.1 Manufacturer

You can choose a manufacturer here. To add a manufacturer to the list of available options, see the section on [how to add a manufacturer in MijoShop](#).

### 1.19.4.2 Categories

You can choose one or multiple categories to categorize your products here. To add a category to the list of available options, see the section on [how to add a category in MijoShop](#).

### 1.19.4.3 Stores

Choose the stores that you want to add this product to. This is only really applicable if you have a multi-store install.

### 1.19.4.4 Downloads

Choose the download to distribute to the user if this is a digital product. You'll have to do this under the "Downloads" section (also found underneath the "Catalog" menu item).

### 1.19.4.5 Related Products ( Autocomplete )

In this location you can set other products that you want to be related to this product to establish a relationship between the 2. In some templates/themes the related products will appear as a list in the tab box on the product's page. Other themes might have the related products displayed elsewhere. All you have to do here is start typing. The field should autocomplete with the product you are looking for

**Diagram 34**

### 1.19.5 ATTRIBUTE TAB

Product attributes are essentially a list additional features of a product that provide benefit. An example of this would be something like the amount of RAM included or the clockspeed of a processor that comes with a computer that you are selling in your MijoShop store.

For a detailed breakdown on attributes, attribute groups, and how to add them see [this post on MijoShop attributes and attribute groups.](#)

**Diagram 35**

#### 1.19.5.1 DISCOUNT TAB

A discount is basically a sale price that you give to a certain customer group (e.g. Wholesalers) when they buy up to a certain quantity of the product. You can set the discount that the customer gets, the quantity they need to buy to get the discount and the dates when the discount(s) are available.

For a detailed breakdown on discounts and how to add them see this post [on Customer Groups, Discounts, & Specials in MijoShop.](#)

|   |   | <a href="#">Add Image</a> |

**Diagram 36**

### 1.19.6 IMAGE TAB

In the “Image” tab, you can add additional images of your product. Note that these are different images from the main image that you added in the Data Tab. How these additional images get displayed depends on the theme that you are using.

**Products** [Save] [Cancel]

General Data Links Attribute Option Discount Special Image Reward Points Design

Points:  
Number of points needed to buy this item. If you don't want this product to be purchased with points leave as 0.

10

| Customer Group: | Reward Points: |
|-----------------|----------------|
| Default         | 200            |
| Wholesale       | 20             |
| test            | 10             |

**Diagram 37**

### 1.19.7 REWARD POINTS TAB

Reward points are points that your customers get when they purchase different products at your store. For a more detailed breakdown on this see [this post on reward points in MijoShop](#).

|---------|----------------------|
| Default | <input type="text"/> |
|---------|----------------------|

**Diagram 38**

### 1.19.8 DESIGN TAB

In the “Design” tab, you can choose a different layout for the product’s page (i.e. different modules than the ones currently set for the Product layout). For a more detailed breakdown on this see [this post on Layout Override in MijoShop](#). It might also help you to read [Understanding the MijoShop Layout and Modules](#) post to learn more about how this all fits together.

### 1.19.9 How To Set Up A Payment Gateway?

Extensions -> Payments takes you to a list of payment gateways that are included in the default MijoShop component.

You will find a complete listing of payment gateways available at the following URL:  
<http://www.mijosoft.com/joomla-extensions/mijoshop/payment-gateways>

Go to MijoShop => Extensions => Payments to set a payment gateway as shown in diagram 39.
